THE BIG BSG GUIDE

www.BettingSystemsGuide.com
Overview and Setup Guide for the BSG Betting System.
This system can be used manually or automated.
(The practical Setup Guide part begins from Section 4)

(Last Updated 2025-3-25)

The tools needed to collect and analyse large amounts of data are now at our fingertips. Betting blindly is now the true gambling. To bet smarter, we need a betting strategy based on big data that finds value bets. Then we need the right staking plan to multiply profits without breaking the betting bank. Once you have a betting system that works, don't waste your time tied to a monitor. Automate it with a betting bot. Become a sports betting data analyst managing a portfolio of automated strategies. That is the best betting system.

I think betting strategies based on big data, either through backtesting sites like Betaminic's football database or through data we collect ourselves through the Bf Bot Manager automated betting software (BFBM) are the way forward. I used to lose 1,000s each year, but after using Betaminic and BFBM that went down to break even and then eventually profit. While I am not making enough to retire yet, I feel like I am on the right track. By sharing my system publicly and constantly having to explain myself it has helped me improve my system little by little. I cannot yet say "This is 100% going to work" but I can definitely say that you are much more likely to make profit following this method than most other betting systems available on the net. The problem with some other systems is that we just don't know why they are making their decisions or they suggest a system with no verifiable historical data to back it up. Then we just put our faith in them, but with big data in BFBM and Betaminic, we can see exactly why we are following a strategy. We can edit and test different versions of it. It is completely transparent. And when we do find something that works consistently and dependably, then we know it is based on a fixed selection method that will likely keep working long term and not be at risk of human error and emotion. And importantly, it can be automated, so we get our time back and not just financial freedom. That is why I think this big data style of betting is the method worth putting time and effort into. (As opposed to Betfair trading where even if you get good, you end up stuck to a PC screen on weekends like a second job.)

The best thing is for you to learn how to use Betaminic and BFBM yourself. Then you are in full control of your betting system. But I understand that it is hard to get started. For that reason, I share some of my betting methods here. They all come from using Betaminic or Bf Bot Manager. Once you get used to my strategies, then it may be easier for you to start using the tools more yourself and take full control of your betting.

Here and on my website, www.BettingSystemsGuide.com, you can see the betting tools I use for my automated betting systems that actually do work. These are the two main tools I use, Betaminic and Bf Bot Manager (BFBM).

Historical Odds and Statistics Database	Automated Betting Software
Betaminic	Bf Bot Manager
Backtest betting strategies with a database of sports statistics and historical odds.	Automate betting on Betfair, Betdaq or Matchbook. (Betaminic linking only works with Betfair version.)
Future picks are sent by email 36-48 hours before kick-off giving plenty of time for manual bettors to place bets and can also be sent to automated betting software for a 100% automated betting system based on value selections.	Automate betting on Betaminic picks or BSG trigger tips.
	Create bots, gather data and build your own betting systems.
(Includes 111 football leagues since 2012, and also tennis and basketball data)	This is an advanced tool to customize almost every aspect of your betting bots.
	£10 per month
€99.90 for each 30 day subscription	(£120 for 12-month subscription)

These are good tools to either research your own betting strategies or follow existing ones.

If you want help getting into big data betting and automated betting bots, then you can copy my system.
I am not saying that you will 100% make profit using my system, but may people have asked to copy my system as their starting point, and then, after they get used to how it works, make their own decisions on how to manage their own automated betting bot systems. I provide my betting bots as a starting point to help you get used to the tools and software available for automated betting.

Overview of my system and its targets

I have my own betting systems created from these tools. I share 3 of them here.

Tom's Betaminic Back Strategies	Tom's Betaminic Lay Strategies	Tom's BSG Draw System
Results since 2024-1-1 to 2024-12-24 suggests **+19% per month**	Results since 2024-10-22 suggests **+18% per month**	Results since 2022-10-29 suggests **+17% per month**
All 3 Systems together aim for about **+50% per month average over a 12-month period**		

I put "Tom's" before each of the Betaminic ones because I have to stress that Betaminic is just a statistics database used to research and create strategies, and these systems are not their officially recommended systems. They are betting strategies I have decided to use. Betaminic is just the tool used to research, backtest and get trigger picks from.

I put "Tom's" before the BSG draw system, because it truly is mine, 100%. I researched and tested it with the Bf Bot Manager software.

The above Betaminic Lay Strategies and BSG Draw System figures are based on my actual bot results with Whitaker Staking divided by the time they have been running.

The above Betaminic Back Strategies results are based on the last 12 months of data from the database backtested in staking analysis. Betaminic strategies were chosen based on backtesting data back to March 2012.

My BSG Draw System is based on data gather through BFBM myself since October 2022.

You can also follow one, two or all of these betting systems.

Manual Betting:

The Betaminic strategies can be followed manually. They can be followed on any sportsbook or exchange. It does not need to be Betfair, Pinnacle, Bet365, etc. Any sportsbook is okay.

Automated betting:

It is possible to follow all 3 systems with Bf Bot Manager (Whitaker Staking possible) on Betfair.

It is also possible to follow 2 of the systems with TippingSports (level stakes only) on Betfair. (The lay strategies cannot be followed.)

Bf Bot Manager automated betting software costs £10 per month with a 12-month £120 subscription. (Free 7-day trial)

TippingSports automated betting service costs £5 per month with a 12-month £60 subscription. (Free 7-day trial)

Which parts are free?

Free for first month: The **BSG Draw System** trigger tips for my BFBM set are free for the first month, but need a subscription after that.

Free for 7 days: Bf Bot Manager offers a 7-day free trial of their software. It needs a subscription after that.

This PDF shows how to setup my betting system to work with Bf Bot Manager and your Betfair account. Manual bettors can just use this guide to find and follow the Betaminic strategies I use, and also refer to the Whitaker Staking table at the end when placing bets.

Which systems are best?

I think they are all good, working systems, which is why I follow them, but if I had to put them in an order of preference it would be as below. The key points for me are:

How much data is it based on? The more data it is based on, the more trust I can put into it. 10,000 bets of data are more trustworthy than 200.

How reliable is the selection data? If the data is based on consistent price models, then it can be trusted more. Betaminic selections come from Pinnacle opening odds and only from league matches. The Pinnacle odds come from a consistent market model. BSG Draw selections come from Betfair market odds and BFBM form data from a wide variety of matches including cups, friendlies, youth matches and women's football. Betfair market odds are not as consistent a market model as Pinnacle since they are an aggregation of multiple market actors. In smaller markets, the Betfair market is even less consistent as a price model.

How many real bets? The more real bet data I have the more confident I can be that the backtesting results are a genuine value trend and not just overfitting/data mining.

How is the monthly bet volume? The more bets we have per month, the less volatility of results, and also the more likely we can get towards the long-term trend, so the aim is to have as high a volume as possible. Automation makes this even easier.

Tom's Betaminic Back Strategies	Tom's Betaminic Lay Strategies	Tom's BSG Draw System
⭐⭐⭐⭐⭐	⭐⭐⭐	⭐⭐⭐⭐
Backtested 12 years on a solid market model and I have been following many of these strategies in various forms on and off since 2019. I am familiar and comfortable with the Betaminic big data strategies. Risk spread over 34 strategies.	A new system based on laying Betaminic picks with good early results.**.** Backtested 12 years on a solid market model, but only a little data from few real bets makes it 3 stars.	A high volume system with a huge amount of real bet data supporting its value trend gives me **a lot of confidence in BSG Draws.** The 0-0 bets have a low win rate which can be hard for some to follow so 3 stars.
Personally following since Aug **2019**.	Personally following since Oct **2024**.	Personally following since Oct **2022**.
+12 years of data of 66,000 backtested results	**+12 years of data** of 63,000 backtested results	**+2 years of data** No backtested results. All BFBM data.
Mix of strategies **+4,000 real bets** of data since June 2020.	One strategy **+500 real bets** of data since Oct 2024.	**+14,000** real bets since Oct 2022 for core trend data. **+3,400** real bets for 0-0 bot since Feb 2024.
High bet bet volume **436 bets p/m**	Medium bet volume **150 bets p/m**	**Very High bet volume** 500 bets p/m (BSG1 A2 core trend) **900 bets p/m** (BSG1 A2,A6 Bots)
Based on **Pinnacle** opening odds for selection and closing odds for P/L calculations	Based on **Pinnacle** opening odds for selection and Betfair closing odds for P/L calculations on BFBM.	Based on **Betfair Exchange** odds near to kick off for selection and P/L calculations
Aims for **+19%** per month	Aims for **+18%** per month	Aims for **+17%** per month
Manual or Automated betting	Manual or Automated	Automated only
£82 per month		**Free** for first month, then £70 p/m or £100 p/m.

Contents

1 Overview of Betting Systems

1.1 System 1: Tom's Betaminic Back Strategies

2024 Results
Below are the level stakes results of my 10 Betaminic strategy choices from January 2024.
Overall +£3,243 profit after £4.227 minus £984 costs to Betaminic for 12 x 30-day subscriptions.
Results are based on a 50-unit bank, so £100 level stakes is equivalent to a £5,000 bank. +£4.227 increase is an **82% increase** on the bank on level stakes.
For 2025 I have reviewed and changed my set for the new year. But these results show this method worked on level stakes. With Whitaker Staking, it will do even better. My new recommended set is larger and now has 34 Betaminic strategies in it.

Results Screenshots

What is Betaminic?

The bookmakers offer odds that are slightly under what their probability models tell them is the fair value. This bookmaker margin is similar to the way casino table games and slot machines are rigged to pay out less then the gambler puts in. In other words, the house always wins, even in sports betting. But there is a weak spot for the bookmaker, and that is their market model. Their models are usually correct, but sometimes they are imperfect. We can find those imperfections by going through past football data and comparing it to past bookmaker odds. Then we can find some patterns that made profit. Some of those patterns might just be random good luck (overfitting / data mining) and some of those patterns will be true value trends. It is those value trends that we want to find and follow ourselves. To do this, we need a large amount of data and software to analyze it. In the past, this took a lot of time and needed some skill with spreadsheets like Excel. Some sites charge for their historical data, but Betaminic offers their historical data for free in the Betamin Builder Tool. (They make their money if you want to get future picks of value trends emailed to you.) This is a great starting point for finding value trends or just following existing value trends that others have found and shared.

Betaminic helps you answer and backtest football betting questions like:
What if you backed the draw in every Premier League game last season?
What if you backed over 2.5 goals in games with teams that have a high goal-average?
Big Data Analysis is now freely available to the ordinary punter thanks to Betaminic and its revolutionary Betamin Builder Tool. Over 300,000 matches since March 2012 in 111 leagues.

Betaminic is a website that has a free online tool for analysing soccer statistics and historical bookmaker odds. By analysing past data of over 300,000 matches, winning patterns can be found. For example, there are some leagues where backing over 2.5 goals in certain conditions leads to profit long term. Betaminic's tool, the Betamin Builder, allows you to find those value patterns. You can also have future picks from those profitable trends emailed to you for a fee so that you can bet on them. Basically, if you can find what betting system would have made profit in the past, it gives you a promising strategy to follow in the future. You can sign up for free and see for yourself. http://www.betaminic.com/?ref=TomW

Betaminic has been available to the public since 2017 and has grown quickly. You can create your own private strategies or follow publicly shared strategies. Currently, there are over 600 shared strategies available on the site. Some of them have been researched and created by Betaminic and their team, and some have been created and shared by ordinary users. All the strategies have been created from researching Betaminic's large database of odds and football statistics. After signing up for free, you can click on the "public strategies" section and see all the strategies.

Big data strategies find the inefficiencies in the bookmaker models where consistent mistakes have been made. They find value bets. The Betaminic strategies can be followed as a standalone betting system. However, once we have a historically profitable betting trend, we can multiply profits with a suitable staking plan and then set up auto-betting and auto-trading bots to get even more value out of these base trends.

I have created and followed various strategies made in the Betamin Builder over the years. One of my biggest mistakes has been giving up on strategies because of short term losing runs and not following them long enough to give their trend a chance to show itself. It is easier to follow low drawdown strategies long term since they don't affect the bank so much with level stakes. Whitaker Staking makes it easier to follow all types of strategies with its odds-adjusted stake sizes.

Some strategies have many bets per month and some have few. In order to get a decent bet volume per month, I follow multiple strategies. The Betamin Builder really is a tool worth playing around with and getting used to. Then you can make your own betting decisions with your eyes wide open and all the data in front of you. But as a starting point I do recommend my selection strategies.

Tom's 2025 Betaminic Strategy Set

On Dec 18th 2024 I made a snapshot of all the current public strategies on Betaminic. It is downloadable from my site. You can use this snapshot to filter down to the kind of strategies you want to use.

For example, the approach I have taken would be to:

1. Filter down to just look at strategies with over 100 Since Shared (SS) bets so we can know the strategy is working and not just a product of data-mining or after-fitting.
2. Filter down to just look at strategies with over 2000 All Results (AR) bets so we can know the strategy is based on big data and not just a very small slice of data from the last 12 years.
3. Filter out strategies with MDDs of 50 or more. (AR)
4. Filter out strategies with ROI under 5%. (AR/SS)
5. Filter out strategies with ELS/MDD ratios of 3 or higher. (AR/SS)
6. You might want to filter by Betaminic rating, but here we are doing our own filtering, so it is not completely necessary since we are doing our rating system.
7. Finally rank and add them by MDD (AR) if you are using level stakes or by ELS/MDD ratios (AR) if you are using Whitaker Staking.

But you should of course filter things by what matters to you.

After you get a ranking of strategies that fit your betting style, then start at the top and work your way down.

If you are able to, then view the filters of each strategy as you decide to include them, and you may want to avoid strategies are almost identical except for league choice. For example, many of the top performing strategies are variants of Contend UD.

The Snapshot

This is like a menu of strategies. Sort and filter down to the ones you like.

Easily filter and sort through the public strategies with this Excel file

Suggested strategies

After making my snapshot, I quickly filtered down using the method I explained above. After removing similar strategies, I ended up with 16 strategies, and then I added in 7 of my personal favorites that had been filtered out by the above method. Together the 23 back strategies use 436 picks per month on average, which is easily doable with the 30-day subscription plan. They aim for 45 units profit per month on level stakes if their historical trends repeat.

After I had made my list of 23 strategies for 2025, Betaminic then published their own list of recommended strategies for 2025 in this article here: "Best Strategies for 2025". That included a set of 9 low drawdown strategies, a set of 18 "Best for 2025" strategies, and an additional 8 strategies suggested for automated bettors. Most of their strategies were already in my set, but I added in 11 more from there to make my x34 set of strategies for 2025.

You can see those strategies with all their detailed stats in the snapshot excel file. I list the statistics of my initial 23 here.

You do not have to follow all of these, but if you were wondering how to use your new subscription, then these strategies are good ones to look at and consider following, editing or just keeping an eye on.

Duplicate bets?
Since we are now following more strategies than 2024, we will get duplicate bets. ("Duplicate bets" = when two or three strategies both give the same bet selection.) Should you bet on them or not?
This is a big debate and up to each person.
Betaminic and a few Betaminic veterans in the Betaminic Reddit group recommend we bet on duplicate picks so that we get results similar to each individual strategy we are following regardless of the other strategies we follow. In fact, their research shows that it results in more profit overall from betting on duplicates, but that comes at the price of more volatility during losing runs since duplicates double the losses of those losing bets.
My personal preference is not to bet on duplicates since I feel it just ends up with large bets on some matches compared to others, and then we go back to the panicked gambler feeling or praying that those particular fixtures win. I worry that duplicate bets make volatility even more extreme. I DO allow multiple bets on the same market though. For example, if I have a draw system and a home win system both betting on the same match, I allow both bets. Some manual users faced with the same choice would only bet on the pick from the strategy with the higher ROI. The choice is up to you. But as an automated bettor, I just let them bet.
With the above set of 34, there are quite a few home and draw strategies. I would not bet on duplicate picks for those, especially the draw picks, since it would make liabilities on some matches quite high.

ELS Multiplier Analysis and planning for drawdowns
In July I did an analysis of 743 Public Betaminic strategies to find that 83% of strategies had MDDs lower than 4x their ELS. (MDD = Historical Maximum Drawdowns. ELS = Expected Lowing Sequence i.e. run of consecutive losing bets in a row)
This time in December, my analysis of 523 Public Betaminic strategies found that 82% of strategies had MDDs lower than 4x their ELS.
So **I still feel that ELSx4 is a good default level for Whitaker Staking**. An ELS x5 is also a good choice for people who want to be extra conservative with their staking since that covers 91% of the strategies studied.
The ELS factor is how the Whitaker Staking sizes are calculated. Using ESLx4 means that we setup our staking plan to survive 4 statistically expected losing runs in a row. This does not eliminate the chance of bankruptcy, but it is more sensible than simple level stakes. It is a more efficient way to use the betting bank.
My filtered down set of public strategies has an ELS/MDD ratio range of 0.99 – 2.61. So over the last 12 years they would have survived even with a 3x ELS Whitaker Staking plan. So I feel confident in my ELSx4 default setting.

July 2024 ELS Analysis

MDD/ELS Ratio	Number of Strategies July 2024	% of Strategies	ELS Multiple for Whitaker Staking	% of Strategies Covered in Total
0.00 – 1.00	72	10%	1	10%

With the Betamin Builder "Aggregator" tool, I can combine multiple strategies and see what their historical results look like together. This chart is for my initial x23 set.
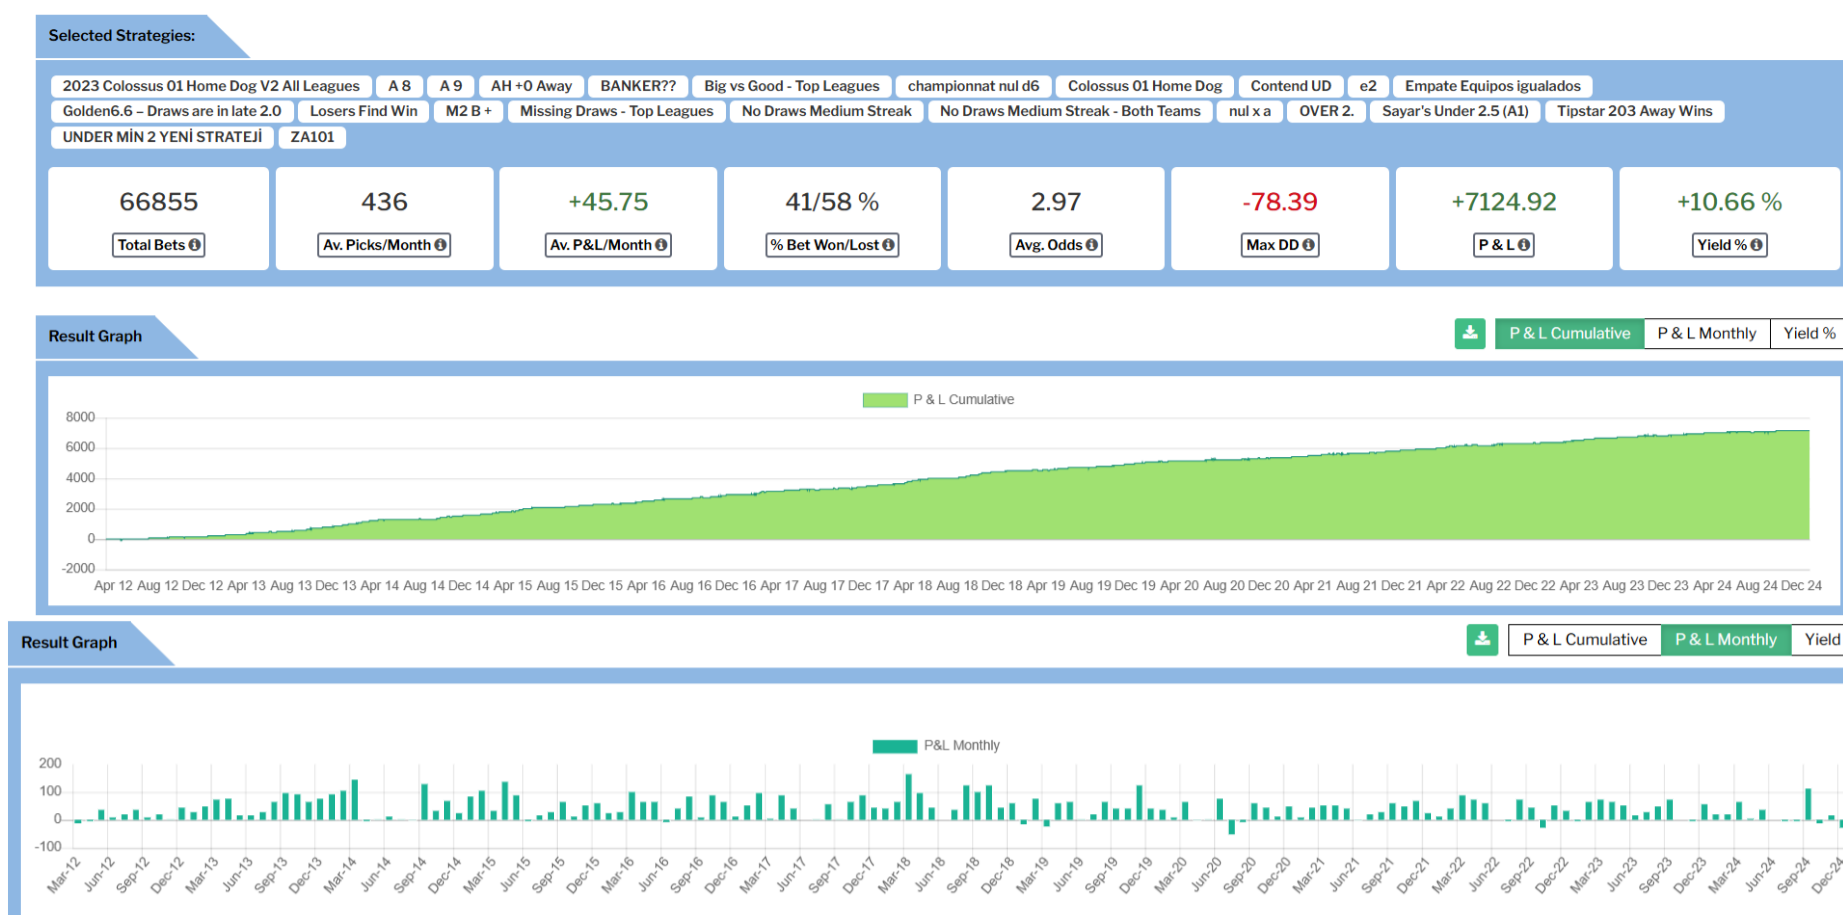

(Screenshot from Betaminic Aggregator tool on December 24th 2024)

The above screenshot shows that together they have qualifying 66,000 bets of data to base this system on. There were about 436 bets per month, and it made +45 units profit per month with a win rate of 41%. The average odds were 2.97 and the maximum drawdown during that time was -78.39 units. It made +7,124 units of profit in that time (based on Pinnacle closing odds which are some of the lowest in the market and very achievable). That is a yield (ROI Return On Investment) of 10.66%. We can see there are losing months as well as winning months, but overall it looks like a nice system to follow.

If I staked £10 per bet, it would aim for +£450 per month. But the biggest drawdown so far was -£783.
If I staked £100 per bet, it would aim for +£4,500 per month. But the biggest drawdown so far was -£7.830.
The great thing about Betaminic data is that it allows you to plan for these drawdowns.
My ELSx4 drawdown estimates put the potential drawdown at -84.23 units for a 66,000 bet period, so this set has been *less* volatile than statistically expected.

All these factors make me want to follow this set long term.

Example Betting Bank Plans

Example Bank Plan based on backtested results with level stakes:
Stakes: £10 level stakes
Bank: 150 unit bank (MDD x1,.5) / £1,000 bank.
Aim: Average 450 GBP profit per month after 1,000 bets. (Total of about £4,500 after 10 months)
Exit point: When 150-unit bank is gone or when the 1,000-bet mark is reached.
Cost: €99.90 per 30-day subscription (£82)

Example Bank Plan based on current results (+10 units per month) with level stakes:
Stakes: £30 level stakes
Bank: 150 unit bank (MDD x1,.5) / £4,500 bank.
Aim: Average £300 profit per month after 1,000 bets. (Total of about £3,000 after 10 months)
Exit point: When 150-unit bank is gone or when the 1,000-bet mark is reached.
Cost: €99.90 per 30-day subscription (£82)

Example Bank Plan based on current results (+19 units per month) with Whitaker NLC stakes:
Stakes: Whitaker NLC staking
Bank: £2,000 starting bank.
Aim: Average £380 profit per month after 1,000 bets. (Total of about £3,800 after 10 months)
Exit point: When £2,000 bank is gone or when the 1,000-bet mark is reached.
Cost: €99.90 per 30-day subscription (£82)

The Betamin Builder tool on Betaminic's site uses a 30-day subscription model.
Each subscription gives you 30-days of full access to their database and includes up to 1000 picks. My full recommended system uses 840 picks per month, so it can be run with no problems with their 30-day subscription. Any of the 1000 pick allowance not used up gets rolled over to the next subscription period as long as you renew before the current subscription expires.
https://www.betaminic.com/betamin-builder/pricing/

My personal profit target for this set is just 20 points per month which is lower than the 45 points the data suggests. This is because in the early stages we are much more at risk of short term volatility. The longer we follow and the more bets we place, the more likely we

are to get close to that 45-point long term trend. We would need 66,000 bets to be confident of repeating that trend level, but we only get 400 bets per month on average. Even after 1 year we will only have about 4,800 bets. If we followed for one year, I would hope to get at least get +20% or more monthly on average. From experience with the high volume BSG draw betting system, I know that even with 1,000 bets we could still be unlucky with volatility and have a "losing" year, but it would not necessarily mean the system does not work. This is an important thing to understand. We need a long term mentality and an understanding of statistical volatility.

How do we know if a strategy is broken or just unlucky?

In reality, for the bookmaker, a customer betting on all home win bets since February 2012 look like this. Pinnacle wins over the long term on all home win bets. Their profit chart is a long smooth line of profit for them, and losing bets for punters.
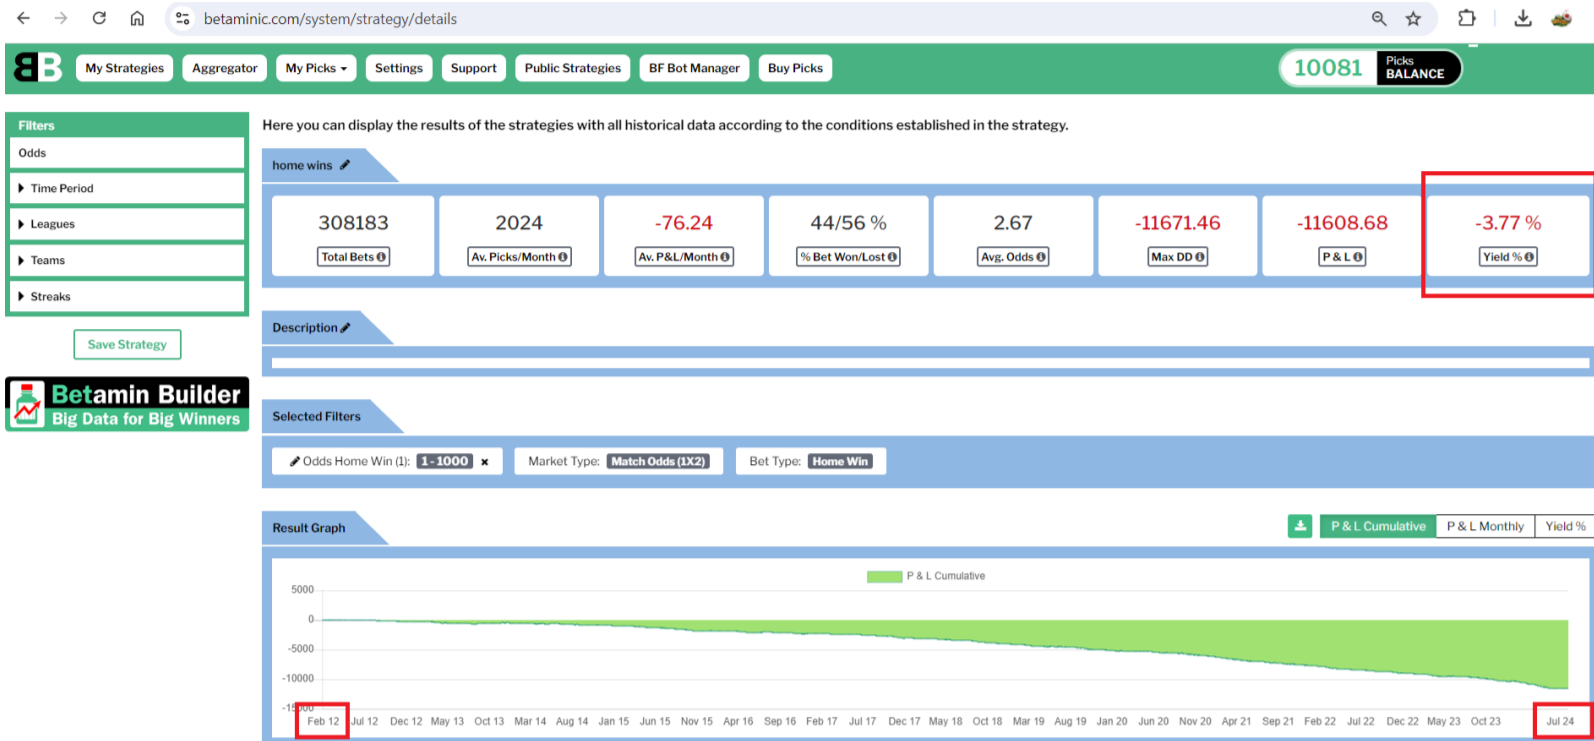

But if we apply selection filters, either form or odds, then we can try to find betting strategies that led to profit in the past.

Here is one of the strategies I chose in the low drawdown set of 9.

2023 Colossus 01 Home Dog V2 All Leagues

(https://www.betaminic.com/system/strategy/details/1177204)

The above strategy has winning and losing months, sometimes even 3 or 4 losing months in a row.

Each strategy in the set is not considered "broken" if it has multiple months of losses. It is only considered broken if it achieves a win rate similar to its historical trend but has negative yield (ROI). Another way to think of things is that these strategies produce X% yield at Y% win rate. So the **2023 Colossus 01 Home Dog V2 All Leagues** strategy produces +7.13% yield for a 37% win rate.

If we have a run of 100 bets with 37 wins (a 37% win rate) and the yield is negative, then THAT means the strategy is broken and has lost its edge.

But, If we have a run of 100 bets with 20 wins (a 20% win rate) and the yield is negative, then that does not mean the strategy is broken and has lost its edge because it fails to "pick" winners. It has just experienced negative volatility or a period of more losses than usual for this selection method.

So it is important to have a clear understanding of what the Betaminic strategies are.

They are NOT tips in the sense that "*we think this bet will win*".

They are *value* picks that the researched strategy filters suggest will "have odds higher than their actual probability" to an extent that betting on them long term will lead to positive yield (ROI). In super simple terms, we have no opinion about if this bet will win or not, we just think that the price is wrong. The odds on this kind of match are usually too high, so we want to bet on this kind of match.

Consistently getting odds higher than their actual probability leads to profit. BUT we still need fate to give us the same win rates so we can see that yield repeated in our results.

If you can get your head around that and can commit to the system long term, then I think it is a good one to automate.

You don't have to follow the same strategies I do, but you can use them as a starting point for getting used to how Betaminic and big data betting works.

Once you get used to how the Betaminic database works, you can start to choose your own strategies to follow and even copy, edit, improve and create your own private strategies with the database. http://www.betaminic.com/?ref=TomW

1.2 System 2: Tom's Betaminic Lay Strategies

Tom's 2025 x1 Betaminic Lay Strategy with £1,000 starting bank using Whitaker NLC Staking (Oct 22nd 2024 – Mar 17th 2025)

01 BSG16 LAY the draw W NLC £1k (10-22)	£895.58	759/1025	74.05%

(BFBM screenshot date: 2025-3-17. Results are with Whitaker NLC staking from a £1000 starting bank since October 22nd 2024 with Betfair closing odds and 2% commission rate.)
+18 points per month average after 5 months

This system is based on laying picks from a loss-making trend researched on the Betaminic database with their Betamin Builder tool. The idea is not to beat the bookies, but to find a trend that is especially negative and to try and copy the bookmaker by laying those picks and piggybacking on the losing trend. In effect, we are trying to be the bookie.

Betaminic themselves do not really encourage the use of their site for lay strategies, but I think it is an area that is worth researching. I know other veteran Betaminic users are making profit with lay strategies, and my first efforts with lay strategies have been going well. I share my best strategy here.

This is a LAY strategy, so you will need to use a betting exchange to lay these picks,
It still uses Whitaker staking, but for lay bets, the loss rate becomes the "win" rate for use that we use to calculate the liability we should risk on each bet. The excel file shows the lay liability amounts for manual bettors to use.

You can recreate the lay strategy in your private strategies are by copying the filters below.
(In principle, only back strategies can be shared on the public strategies page, so you need to make this one in your private strategies area.)

2024 BSG16 LAY the draw Betfair Exchange LAY STRATEGY
https://www.betaminic.com/system/strategy/details/1308246
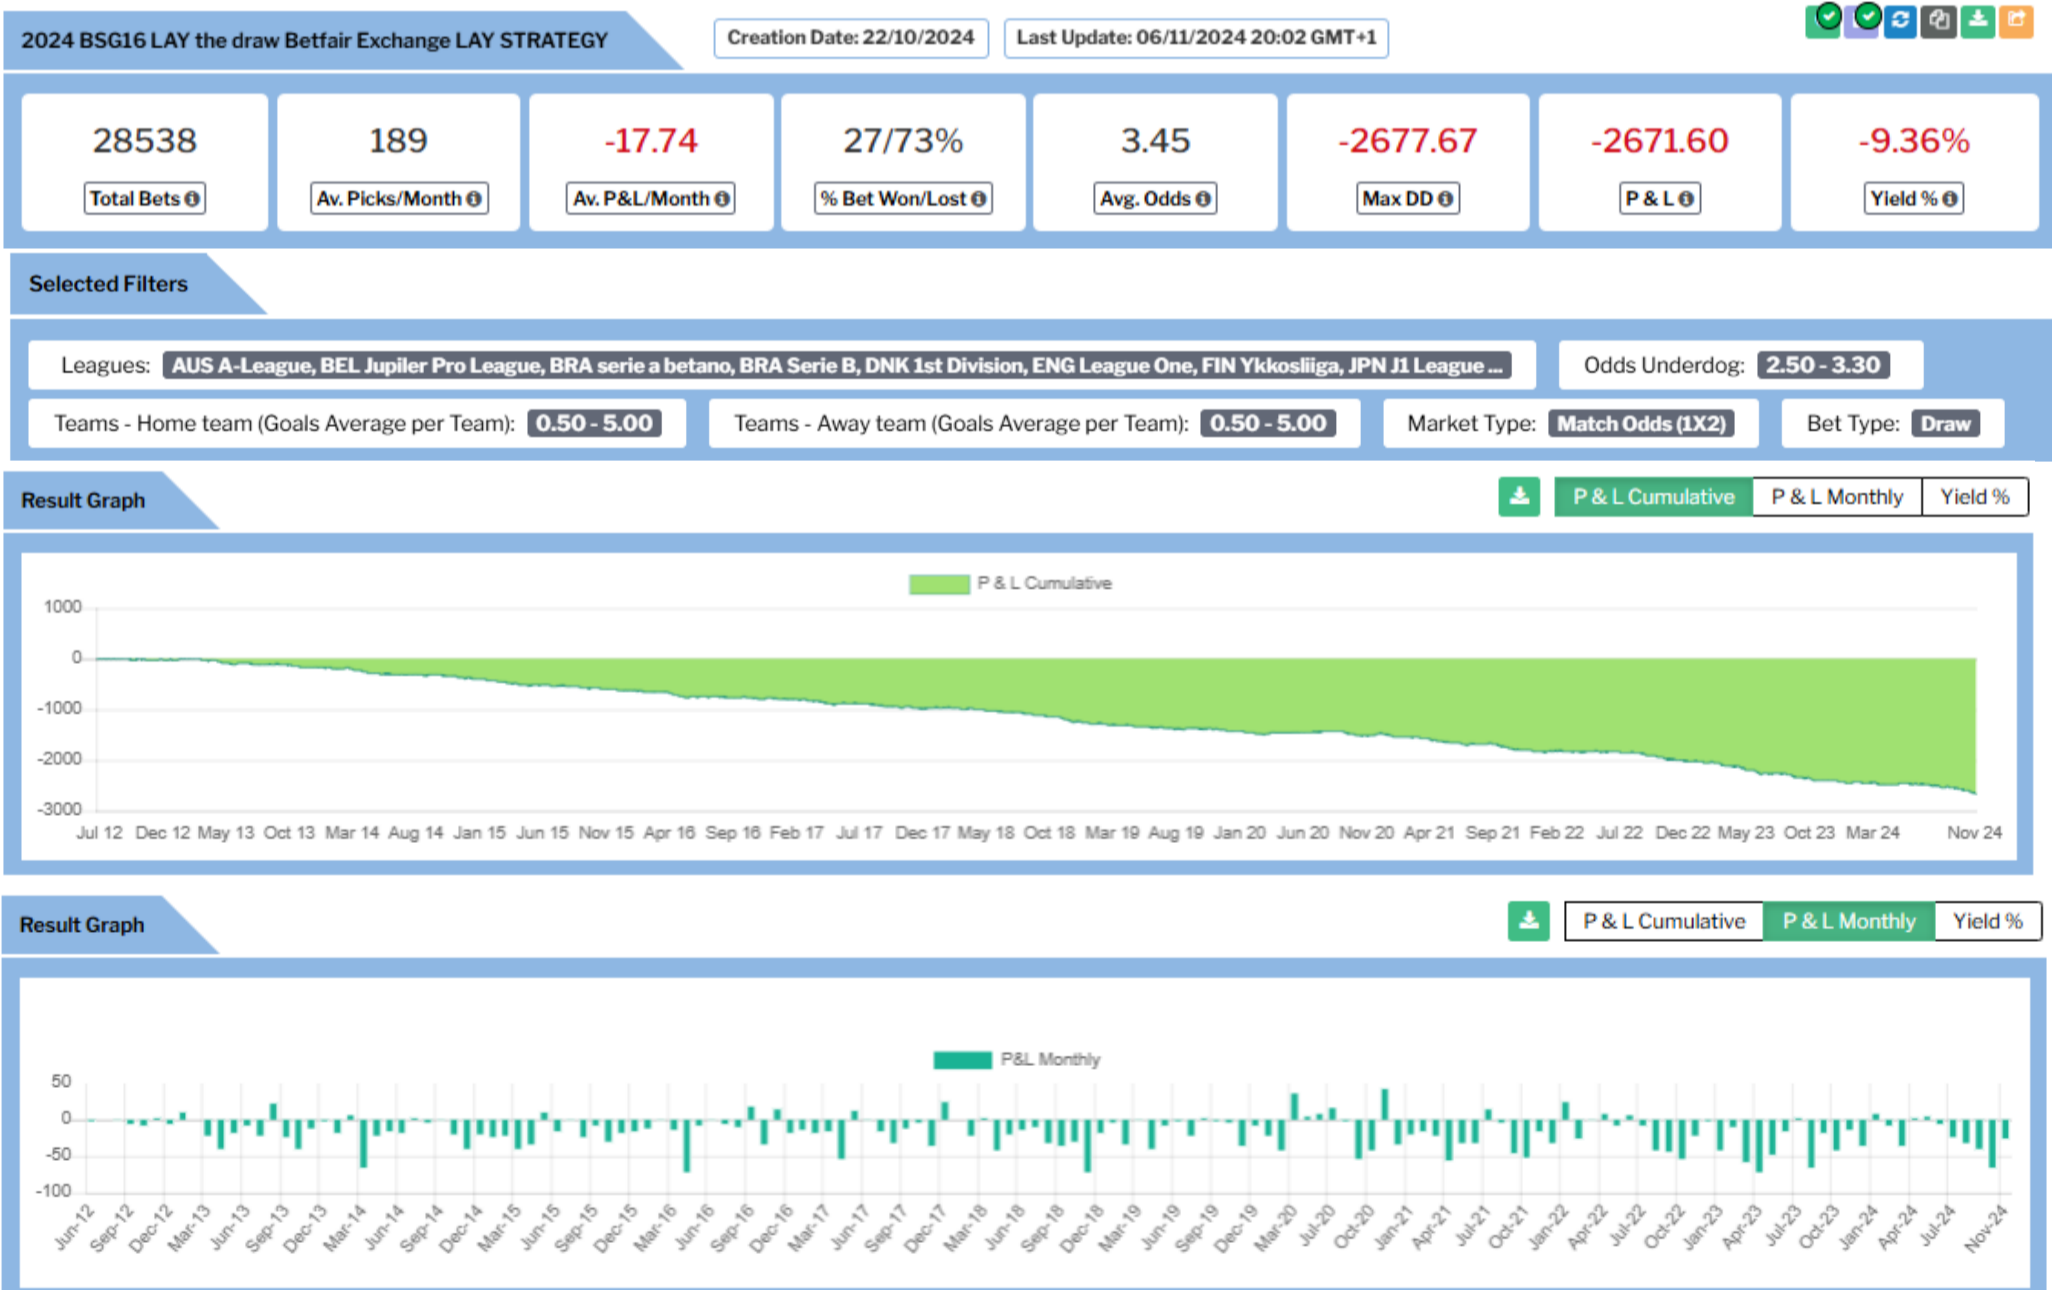

I included all leagues with losses of -5% yield or worse.

Lay Betting with Betaminic Strategies
Note the difference between Pinnacle Back Odds and Betfair Lay Odds
1. Pinnacle closing odds are not the prices we lay at
2. We get Betfair closing lay odds minus commission
3. Early research suggests average 5% difference in prices.
My strategy has -9.25% ROI. Betfair lay odds are +5.27% higher than Pinnacle closing back odds average. So there is a 4% margin left.
2% of the profit will be taken by Betfair.

3.92% is the hypothetical lay ROI I am aiming for.
I choose leagues with -5% ROI or worse. And I look for strategies with: smooth downward trends and losses nearly every month

1	**2024 BSG16 LAY the draw Betfair Exchange LAY STRATEGY**	Betaminic strategy page My YouTube video demonstration	https://www.betaminic.com/system/strategy/details/1308246 https://youtu.be/jugPxYj0LTM?si=bOab4_kcAhshi28E

Example Bank Plan based on current results (+18 units per month) with Whitaker NLC stakes:
Stakes: Whitaker NLC staking
Bank: £2,000 starting bank.
Aim: Average £360 profit per month after 1,000 bets. (Total of about £3,600 after 10 months)
Exit point: When £2,000 bank is gone or when the 1,000-bet mark is reached.
Drawdown: New strategy and lay method, so the drawdown is not known yet. Estimated Potential Maximum Drawdown of -30 according to ELSx4.
Bets: Lay the selection at current odds close to kick off.
Cost: €99.90 per 30-day subscription (£82) (The same subscription used for the back bet system.)

If you follow both the Back and Lay system, then you only need a £1,000 starting bank, since together them aim for +37 points per month which covers costs and would make meaningful profit. You could even start with £500 and build capital up to 1k/2k.

The Betamin Builder tool on Betaminic's site uses a 30-day subscription model.
Each subscription gives you 30-days of full access to their database and includes up to 1000 picks. My full recommended system uses 840 picks per month, so it can be run with no problems with their 30-day subscription. Any of the 1000 pick allowance not used up gets rolled over to the next subscription period as long as you renew before the current subscription expires.
https://www.betaminic.com/betamin-builder/pricing/

1.3 System 3: Tom's BSG Draw System

This betting system is based on draw trends researched and developed entirely in the Bf Bot Manager automated betting software for Betfair Exchange.

The main draw trend is "BSG1".
It is a Match Odds FT draw trend that is still in profit after 15,111 bets since October 28th 2022 with 1.9% ROI and an average 10 units profit per month after 29 months. For me, I think that is a truly amazing result after so many bets and such a long period of time. It is my best betting bot ever created.

BSG A2 Bot

A2 BSG draws curr £1 (2022-10-28) TS tips	£288.02	4917/15111	32.54%

I use that trend as a trigger to bet on related markets that achieve higher ROI, such as the Correct Score market, the HT under 0.5 goals market and also in-play bets after goals are scored.

If we bet on the 0-0 FT Correct Score for the same fixtures, we get a 5.2% ROI and an average 17 units profit per month after 13 months after 4,435 bets. It is very interesting and important to understand that these fixtures are selected using the same filters and criteria, but by betting on variations of the same result, we get higher ROI. This is an important concept you can use in your own bot testing. If you have a trend that makes a small yield in one market, it might make a higher yield in related markets and is worth testing further. Also, a high volume of bets with a low yield can be as good as a higher yielding strategy with a lower bet volume, as shown with these two bots BSG A2 and BSG A6.

BSG A6 Bot

A6 BSG draws CC0-0 £1 (2024-2-19)	£230.35	564/4435	12.72%

As you get into using the Bf Bot Manager, you will probably end up running a variety of bots all the time to track and follow trends in different markets with new bots added in at different times. I recommend using a codes when naming bots and also writing the dates you start them to make later analysis easier.

All my bots start as £1 level stakes test bots. Any betting system must work on level stakes first to prove it works. Staking plans are added later to multiple profits and be efficient with the betting bank.

Show	...	...	Name	P/L	Wins/Total	Strike rate

			A8.2 BSG draws InPlay opp. £1 2-0 (2025-3-...)	£26.95	4/14	28.57%
			A8.3 BSG InPlay opp. +4t £1 2-0 (2025-3-15)	£33.85	4/12	33.33%
				P/L: £857.48		

As you can see, not all bots are green with profit, but I keep testing them.

At the moment, I recommend using the BSG1 A2 and BSG1 A6 bots with Whitaker NLC staking. But the whole BSG1 bot set is available to subscribers if you want to run them on your BFBM.
BSG1 A2 aims for +10 points per month on average with WNLC staking
BSG1 A6 aims for +7 points per month on average with WNLC staking
Both together aim for +17 points per month on average over a 12 month period.

Example Bank Plan based on current results (+17 units per month) with Whitaker NLC stakes:
Stakes: Whitaker NLC staking
Bank: £2,000 starting bank.
Aim: Average £340 profit per month after 1,000 bets. (Total of about £3,400 after 10 months)
Exit point: When £2,000 bank is gone or when the 1,000-bet mark is reached.
Drawdown: On level stakes, the A2 bot had a drawdown of -120 units and A6 had a drawdown of -160 units. For this reason, Whitaker NLC staking is recommended.
Cost: Free for first month, £70 per month with 12-month subscription (£100 for one month)

Bot Result Screenshots

I have been chopping and changing staking plans and bot setups for a long time with the BSG set, so there are not as many long term bot results for the current recommended set of BSG1 A2 and BSG1 A6 with Whitaker NLC staking.

To follow, please see the related setup guide "Section 4" later in this document.

1.4 All 3 Systems together

By using multiple strategies together in one big system I hope to spread the risk of one or two of the systems having a bad month. Even with that, there are still losing months, but overall, it has made profit on level stakes and Whitaker Staking can improve on that.

These are my results of my recommended betting systems and staking plans as they changed over the months since I started keeping better notes in June 2023. The result of my fiddling has been an average of +15% increase per month after 20 months.

Total	Total NET P/L	Monthly Gross P/L	Monthly NET P/L	Nominal Starting Bank	Gross Bank Change %	My Costs	System Notes
2023-6-19

1.5 Whitaker Staking and Bank Management

I recommend Whitaker Staking since it balances the risk/reward ratio at every odds level.
The staking plan is explained with full research data in "[The Staking Plans Book](#)".

What is Whitaker Staking?

Whitaker Staking is a method where each bet is placed at a percentage of the bank that is relative to its odds implied expected drawdown as calculated by the number of Expected Losing Sequences (ELS) we want the bank to survive over a specific number of bets.

Whitaker staking adjusts stake size based on the odds levels of each individual bet. It bets more on lower odds and less on higher odds. Lower odds bets tend to have higher win rates, and thus shorter losing runs which leads to less volatility in the short run. Higher odds bets tend to have lower win rates, and thus longer losing runs, which leads to more volatility in the short run. It aims to be the most advanced staking plan ever made.

The stake percentage is calculated based on an Expected Losing Sequence (ELS) multiple and the number of bets to be considered.

The ELS tells us the statistically expected number of times a bet at specified odds is likely to lose in a continuous unbroken streak for a set number of tries based on its odds implied probability of occurring.

For example, a 50-50 coin toss with odds of 2.00 has an ELS of 1 for 2 tries, so it would be statistically normal (neither lucky nor unlucky) for 1 of the 2 coin tosses to be a loser, but not impossible for both to lose in a row. But a 50-50 coin toss with odds of 2.00 has an ELS of 10 after 1000 tries, It would be statistically normal (neither lucky nor unlucky) for 10 of the 1000 coin tosses to lose in a row. Any betting system based on such bets should plan that 10 losses in a row are expected to come, and the staking plan should be able to handle that. A 50-50 coin toss with odds of 2.00 has an ELS of 13 after 10000 tries. It is the law of numbers that the more we do something, the more chance of larger extremes occurring.

Most bettors are not concerned with the length of losing sequences, but the maximum drawdown a betting system might have from cumulative losing sequences. The staking plan should be able to help the bank survive those drawdowns without going bankrupt and still be able to move forward and make meaningful profit. We can estimate the drawdowns of a betting system as a multiple of its ELS. Drawdowns are basically the equivalent of several ELSs happening close to each other. We just need to decide how many ELSs we want the bank to be able to survive. Whitaker Staking's default settings are to survive four ELSs over a 1000 bet period, but we can adjust the settings to be more or less aggressive. A higher ELS calculated over a longer bet period will be more conservative, a lower ELS calculated over a shorter bet period will be more aggressive.

I compared the ELSs and maximum historical drawdowns of 743 betting strategies, many of them with over 5,000 bets of data going back 12 years. The result was that 83% of those strategies had drawdowns that were their ELSs of less than 4. This is why I chose the ELSx4 as the default setting. If a higher ELS multiple is chosen, then it covers even more volatile strategies, but as the ELS multiplier increases, the stake size decreases and the betting bank may be getting used less efficiently just to protect against the absolute worst-case scenarios. It is a risk-reward balance.

MDD/ELS Ratio	Number of Strategies	% of Strategies	ELS Multiple for Whitaker Staking	% of Strategies Covered in Total
0.00 − 1.00	72	10%	1	10%
1.01 − 2.00	217	29%	2	39%
2.01 − 3.00	217	29%	3	68%
3.01 − 4.00	**114**	**15%**	**4**	**83%**
4.01 − 5.00	59	8%	5	91%
5.01 − 6.00	32	4%	6	95%
6.01 − 7.00	11	1%	7	96%
7.01 − 8.00	6	<1%	8	97%
8.01 − 9.00	7	<1%	9	98%
9.01 − 10.00	3	<1%	10	99%
10.01+	5	<1%	11+	100%
	743			

For example, if we wanted to bet on those 1000 coin tosses without going bankrupt, we might look at the ELS of 10 and decide we want to survive four ELSs. Four ELSs of 10 makes a maximum expected drawdown of -40 units. (4 x 10 = 40). If we have a 100-point bank, then we would divide that by 40 to get 2.5. So we can plan that by betting 2.5 points per coin-toss, we think our bank can survive the statistically expected drawdown that is perfectly likely to happen over the next 1000 bets. We think this should work for 83% of betting strategies. If we wanted to be more conservative, we could try to survive 6 ELSs which we think will work for 95% of betting strategies. An ELSx6 for odds of 2.00 over 1000 bets would be -60 units. Then we divided a 100 point bank by 60 to get 1.66. So we can plan that by betting 1.66 points on each coin toss, we think our bank is capable of avoiding bankruptcy in 95% of situations. But stake sizes are lower, so we might be being inefficient with our bank.

The stake size is calculated for each individual bet based on its odds.

For example, if we set an ELS multiple of 4 for a 1000 bet period, the stake levels will be as below:

Odds	Stake as % of bank	Profit Target as % of bank
1.50	3.98%	1.99%
2.00	2.51%	2.51%
2.50	1.85%	2.77%
3.00	1.47%	2.93%
4.00	1.04%	3.12%
8.00	0.48%	3.38%
20.00	0.19%	3.53%

These all seem like very sensible numbers.

You can read more detail about how this staking plan was researched and the logic behind it in the 333 page *The Staking Plans Book.*

A Shared Bank for all you betting systems

Due to statistical independence, our next stake should always be calculated at the right stake size for the bank at this moment. Each bet is unconnected, so it could come from the BSG Draw System, a Betaminic strategy bet, or any other bet with long term positive value. One bank does not need to be exclusively kept for one system.

This means that all bets, from all your betting strategies, can share the same bank if they are using Whitaker Staking. Since it is actually already giving each odds range its own ELSx4 unit bank to avoid going bankrupt. But you do have one big decision. Do you link your Whitaker 4 staking to your current your cumulative balance (LC) or to your starting bank (NLC).

NLC means "Not Linked to Cumulative" bank balance i.e. constant stakes based on a percentage of the starting bank.

LC means "Linked to Cumulative" bank balance i.e. stakes are based on a percentage of the current betting bank balance.

More simply, Whitaker NLC is smart level stakes. Whitaker LC is smart percentage staking.

LC or NLC? Link to Cumulative Bank (LC) or not (NLC)? Smart level stakes or smart percentage staking?

If we link the staking plan to the cumulative bank (**LC**), then it allows you to commit a fixed amount to the system and not have to refill if there is a losing run. If you get winning runs, then your bank will increase very quickly and make more money than the NLC version, BUT once you have a high balance, you could still see that drop by 50% on a bad run, so you are **always** risking **all** of your bank. *More risk for more gain over the long term.*

If we don't link the staking plan to the cumulative bank (**NLC**), it is risky in the short term if you hit several losing runs and your bank gets reduced a lot. But it will rebound quicker from early losing runs since it does not reduce its stakes. AND, the longer you follow the system, the safer your bank will be as losing runs will probably only affect your profit after you hit the 1,000 bet mark. *Less risk for less gain over the long term.*

For me, I think NLC is good for protecting a larger bank.

My recommendation is to use Whitaker NLC.

This is because we do not know which scenario we will face in our betting period:

Scenario A	Lucky winning run	IF it is a smooth ride up, then the LC will make lots of profit. NLC will make some profit, but not as much as LC, but how often do we get such good luck?
Scenario B	Good Rollercoaster	IF it is a volatile ride up with big losing and winning runs, then it is the luck of the wins and losses timing over if LC or NLC will win more, but LC will probably come up on top BUT have massive -50%/+100% months that are not for the faint hearted.
Scenario C	Big Drop or Big Climb First Rollercoaster	IF there is a big losing run at the start, but then it returns to profit, then NLC will make more profit in the short term until the LC bank recovers. IF there is a big winning run at the start, followed by an equally big losing run, but still ending in decent profit, then NLC will make more profit since LC loses more from the bigger bank's larger stakes in the second half.
Scenario D	Bumpy Rollercoaster ending flat	IF it is a volatile ride up and down, ending up flat, with a bit of profit or loss at the end on level stakes, then NLC will make more profit than LC.
Scenario E	Bad Plane	IF it is a smooth ride down, then LC will slowly head towards 0, but NLC will hit -100 points first, and then be stopped manually.

Safety First

I recommend Whitaker NLC, purely because it is the safer option. In most cases we get poor short term runs and LC will go down in those periods and my experience is that most people give up or panic despite the staking analysis suggesting that over a 12-month period LC will get more profit in most cases. NLC will show profit in winning periods and has a better chance of showing profit in bumpy periods than LC does. In losing periods, we will hit zero faster than the slow death of LC, meaning we can review the systems and start the next betting plan faster. All betting systems have the risk of bankruptcy, nothing is "safe", so I think we need to be efficient with out betting bank and take a good risk/reward ratio position. Whitaker NLC gives that.

Splitting the bank 50-50 between LC and NLC

If you wanted, you could split the bank 50-50 between Whitaker NLC and LC, and I have done so in the past, then we hedge our bets and get the best of both worlds. Even if our betting system wins long term, we don't know if we are going to hit a smooth upward trend or a volatile flat trend, so the two bank system hedges bets on both.

The NLC part gives us stability through bumpy periods, and the LC bot gives us a chance of a lucky lottery ticket ride that could x10 our banks on a good run of positive volatility.

Also, if we run LC only, then there is indecision about when to stop, is it when the bank reaches 20%, 10%, 1% of its original levels? If we split our bank 50-50, then the stopping point is when the combined LC-NLC banks reach -100% of the starting bank. Then the betting system gets stopped and the strategies and settings reviewed for the next plan.

I am spreading my risk on my betting systems by running a bank split between NLC and LC.

You can see how much is staked for each odds level in this Excel file.
Whitaker Staking Excel File **Download Excel File version here**

You can see profit graphs of more examples of Whitaker Staking applied to various real betting systems on this page:
https://bettingsystemsguide.com/whitaker-staking/

1.6 Who am I? And why you should or shouldn't listen to me.

I am basically a bettor who has made lots of mistakes along the way, and in an effort to stop making the same mistakes repeatedly, took my betting diary public. By having to explain myself and getting feedback from people trying to use my bots, things have improved a lot. I started off with card games and poker, moved on to football betting, and then onto trading markets on Betfair with most of my brief successes coming from the Lay The Draw method. But this was leading to me spending upwards of 8 hours a day in front of my PC on weekends and it seemed like a second job without any guarantee of pay. I needed to find a better way of doing thigs and get back to real life. I needed to be more methodical. While trying to create a database of football statistics and historical odds, I found Betaminic, which already had what I wanted. This introduced me to value betting. To help pay for the cost of the service, I wrote two books about how to use it, those books were *Winning Betting Strategies* and *Big Data Betting*. My next problem was that it was time consuming to place bets manually each day which was when I found Bf Bot Manager. I had some in-play betting ideas, which is when I found InPlayTrading to fill the livescore data gaps on BFBM. I ended up using BFBM a lot and emailing them with questions so much that eventually they asked me to rewrite the BF Bot Manager manual. So I can say I know every screen, button and rule in the software. Once I had working systems from BFBM and Betaminic, I needed to know the right staking plan, and since there was a lack of any fair comparison between the major staking plans, I researched my own in *The Staking Plans Book*. Sometimes my PC or VPS lost data from windows automated resets, and I needed another way to keep my data tracked and safe. Also, some people did not believe my results, so I needed a way to prove it with 3rd party verification, and it was a way to share my BSG System with others, so I used TippingSports. By this point I had a website, books, a YouTube channel, a Reddit community and almost *weekly* emails coming in from people around the world (Australia, Peru, China, Sweden, Brazil, Nigeria…) asking about bots and the systems I was writing about in my monthly betting diary/newsletter. All that was quite fun, but the emails are now *daily* and I feel very sorry and rude for not answering all of them when I miss one. So I have tried to write as detailed a setup guide as possible here for everyone to read and use free, and if you need more interactive help getting started or customizing things, then I am afraid it needs a subscription to my support service. https://bettingsystemsguide.com/product/bsg-it-support-1-month/ I didn't think it would become all this, but here we are.

So I think you should read and understand my ideas about betting and staking plans, but also know that this is just my experience. It has been more public than most, so it has been improved by a lot of feedback and interaction with others who have also actually used the same betting system and made it work. I have had to think through, test, recheck, explain and justify my ideas hundreds of times. But it is still just one way to approach betting and you should add this in to all the other things you have read and make your own decisions.

I am not a professional bettor. I still have a day job. Betting is too unpredictable to ever be a substitute for a proper income. Betting is my hobby that scratches an itch to beat the betting market and maybe get some consistent returns from my bots. I live in a small city in Japan, quite isolated from the English speaking world, so I do enjoy the connection I get with people from sharing my ideas. But even if my bots made me 5k per month for 12 months in a row, I would never quit my day job. You never know when betting rules, regulations and laws may change. My plan is to take the winnings and put them in index funds. When they reach my personal target, then I can quit my day job.

Here are 13 of my biggest mistakes and you may recognise some of them:
1. Don't play poker drunk for serious money with people you just met.
2. Don't gamble for serious money with friends or family.
3. Don't listen to people on the internet who say they know fixed football matches.
4. Don't listen to people on Telegram who say they have someone sitting side-court on tennis matches and can give tell you the game winner before the internet knows and reacts.
5. Don't build up balances of more than 1000 GBP in any sportsbook/exchange/betting agent until you have done all your KYC and are sure you have passed it and can withdraw smoothly. (KYC = Know Your Customer identity check where you provide proof of address and identity.) Some sites only ask for the complicated KYC parts when you request your first withdrawal.
6. Don't waste your life trading on Betfair 12 hours a day on your weekends. Real life will pass you by.
7. Only gamble with money you can afford to lose. Don't gamble with food/rent money.
8. Sometimes you do need to use self-exclusion for 6 months, 1 year or permanent. If you feel you need to, just do it.
9. If you do automated betting, and finally get away from the PC screen, don't spend every 5 minutes checking scores on your phone. Real life will pass you by. Decide a fixed time each day to check your bots. If you manual bet, place your bets in the morning and then check them the next morning. Watching livescores and live bets can lead some people to place rash, emotional bets. Manual betting with Betaminic or automated betting with BFBM can remove some of that risk.

10. Don't go big on systems with less than 1000 bets of data behind them.
11. Don't pay for tipsters who don't have 3rd party verified results. And check how those sites register their results.
12. Don't follow people who are just picking bets based on their gut feeling. It is no basis for a long term betting strategy.
13. Don't use any form of recovery staking. It never ever turns out well.

2 Bf Bot Manager automation software vs TippingSports automation service

Bf Bot Manager

Bf Bot Manager allows you to create and run a lot of very versatile bots on Betfair. I use this for creating and managing my bots. It allows me to control almost all aspects of betting in terms of time to bet, staking, overrounds, back/lay ratios, bet persistence, in-play bots, live data triggered betting, etc.

There is a one week free trial, but you need a subscription to use it long term. (10 GBP per month with a 1 year subscription) It also needs your PC to be online and running to bet. Some people eventually set up a VPS (Virtual Private Server) so that they don't need to use their home PC for it. My VPS costs me 30 per month with the SimplyHosting M-SSD3 plan.
You can follow my BSG Draws system free for 1 month free on it and then 70 GBP per month after that.

I also research and create betting systems based on Pinnacle historical odds and football statistics going back 12 years using the Betaminic database. Those strategy bet instructions can be sent to the Bf Bot Manager software and advanced staking rules can be applied to them.

TippingSports is an online service run by the same people who created Bf Bot Manager. The difference is that this is a super simple version that does not need any downloading of software. It allows you to connect your Betfair Exchange account to the TippingSports site and then you select the Tipsters that you want to follow (such as Betaminic or BSG draw systems) and it will bet on those tips automatically for you BUT only with level stakes. Then it will do everything for you and you can just monitor it when you want to.

There is a one week free trial, but you need a subscription to use it long term. (5 GBP per month with a 1 year subscription) It does not need your PC to be online and running to bet. So this service is good for people who just want something super simple with level stakes.

4 Automated Betting Support for my referrals

I use a variety of websites, software and tools for my betting. If you use my referral links when you sign up for these services, then I will do my best to give you technical support when using them. If you are a subscriber to my BSG-BFBM IT Support Service, then I will give you the bots I have for those services and do my best to help you build the bots you want
.
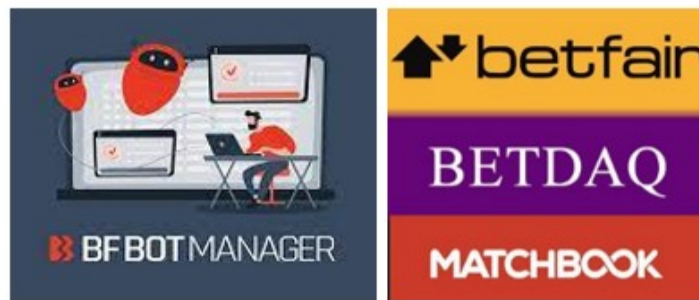

Bf Bot Manager

Bf Bot Manager is probably the best software for automating your betting.
It is also the ONLY automated betting software with Whitaker Staking in it.
If you want to use Bf Bot Manager, let me know, and I will send you my current bot set.
Be sure to use my referral link if you want to get BFBM support from me: https://www.bfbotmanager.com/affiliate/364

Betaminic is a football statistics and historical odds database where you can research, create and follow strategies based on backtesting data back to 2012. You can also follow existing publicly shared strategies.
Betaminic strategies can be automated in the Bf Bot Manager for Betfair Exchange.
If you want to use Betaminic as trigger picks for bots, let me know your most recent order number and I will send you my 3 betting books as PDFs.
Be sure to use my referral link if you want to get Betaminic support from me: http://www.betaminic.com/?ref=TomW

InPlayTrading (IPT) is an in play data feed provider. You can use their tool in a browser for manual betting, and also link it to your Bf Bot Manager software to give you an advanced in play statistic data feed that includes their unique Pressure Indexes (PI 1,2,3).
If you want to use the InPlayTrading (IPT) livescore data feed for BFBM, let me know, and I will send you my test bot sets that try to automate their recommended strategies plus some of my own original ones.
IPT based strategies can be automated in the Bf Bot Manager for Betfair Exchange.
Be sure to use my referral link if you want to get InPlayTrading support from me: http://www.inplaytrading.com/?a=32176

InPlayTrading also have a PreMatchTrading service that I have not tried yet, but their software *"uses prices in liquid markets and calculates relevant prices in secondary markets thus allowing users to spot mispriced events and profit from trading them before the game has started. PMT is a football markets model based on probability theory and statistics. It is used on the trading exchanges like Betfair/Betdaq."* So it sounds like they are looking for value in secondary markets, kind of like how we found 4-5% value in the under 0.5 goals market for the BSG draws system event though the core trend was a 2% ROI in the Match Odds full time draw. It is a manual betting system and not automated with BFBM.

The Staking Machine

This is a great tool for importing your bet results or even results from the Bf Bot Manager, TippingSports or Betaminic and then doing staking analysis on them.
(Note: Whitaker Staking is not on there yet. But tests with level stakes, percentage stakes, target profit stakes are still very useful.)
If you want to use The Staking Machine (TSM) software for staking analysis, be sure to use my referral link if you want to get TSM support from me: https://www.thestakingmachine.com/affiliates/whitaker

Hedger Pro

HedgerPro is a horseracing statistics and historical odds database where you can research, create and follow strategies based on backtesting data back to 2021. You can also follow existing example strategies shared by HedgerPro.

Hedger Pro strategies can be automated in the Bf Bot Manager for Betfair Exchange.

If you want to use HedgerPro as trigger picks for bots,

be sure to use this **5% OFF discount code "HPBSG"** if you want to get HedgerPro support from me.

https://www.hedgerpro.co.uk/

4 Bf Bot Manager Setup Guide

4.1 Video for first time Bf Bot Manager users

If this is your first time using Bf Bot Manager. I have an introduction video aimed at first time users of the software.
https://youtu.be/xTGph4fdCac

4.2 Get My Current Bot Set

Email me to get the current bot set BettingSystemsGuide@gmail.com.

Tell me if you want the "compact set x4" or the "full set x90".

I strongly recommend the full set of x90 bots. This is because the compact x4 bot set is fine when things are going okay, but when things go wrong, it is hard to know what the problem is. With the full set of x90 bots, you will be able to see which strategy picks you are receiving correctly, and which you are not. You will know how many picks you received for each strategy. You will be able to see how the market conditions affect bets getting placed or not. You will see the performance of each strategy individually with Whitaker NLC staking. You will be able to easily create duplicate bots for tracking or running different stalking plans.

Super Simple Compact Set x4 bots

Recommended Full Set x90 bots

Bot Systems (Full set)

Each betting system is split into groups.

Group 1 - Tip receiving bots placing 1 GBP bets with default market conditions

Group 2 - Tracking bots with market conditions for each separate strategy with Whitaker NLC staking and a 100 GBP bank.

Group 3 - The main betting bots with large banks. Change these bots if you want to edit the main betting bank size.

Group 4 - Monitoring bots. Some sets have additional monitoring bots if people want to test different ideas with the same tips.

Groups 1 & 3 bots are all necessary for each of the systems to work. Groups 2 and 4 are optional for tracking purposes

BSG Draw Bots

https://bettingsystemsguide.com/bsg-draw-system/

The Group 3 main betting bots are using a 2k bank with Whitaker NLC staking.

The A1.02 bot market settings are 59m/103%/4t

The A1.06 bot market settings are 32m/4t with no overround rule.

The set includes some trends for monitoring that are not used in the Group 3 main bank. (BSG1 FT draw opposite price, BSG1 HT U0.5 goals, BSG2 FT 0-0) You can run these for monitoring or your own tests, or leave them switched off.

Betaminic back strategies

https://bettingsystemsguide.com/betting-strategies/

I know people don't really like big sets, but I think it is necessary to see how each of the strategies we are following are performing.

In the short term there will be reds and greens, but as time goes on, they should mostly become green, and we are planning to follow each individual strategy until it hits 1000 bets, not 1000 Betaminic picks, but 1000 picks of each strategy. Some strategies will reach the 1000 mark faster than others, and that is how we judge their performance and if we want to keep them in.

BSG-BFBM IT Support Subscribers

BSG Subscribers can ask me for a custom bot set so you don't have to do all the editing yourself.

I will customize your bot set as you want it. (Bank size, staking settings, market conditions, etc.)

I will explain any questions you may have about the bot set. This can save you a lot of time in reading pages of PDFs.

I will help you to make any other bot sets that you are trying to develop. (Betaminic, BFBM, IPT, HedgerPro, etc.)

You can have any of my test bot sets for BFBM, IPT or HedgerPro if you want them.

You get all 3 of my betting books in PDF form if you don't have them yet.

Please buy a subscription https://bettingsystemsguide.com/product/bsg-it-support-1-month/

and email me BettingSystemsGuide@gmail.com to let me know what kind of bot set you want.

Non-BSG Subscribers

Non-subscribers can still email me to get the bot set and be put on my newsletter list for bot set updates. This is important so that you get alerts when changes are recommended.

If you use the sets as they are with no changes, then there should not be any problems.

But you will have to read the BSG setup guide and BFBM manual to understand and make any edits you want yourself.

The bot sets can be really quite complicated and need quite a lot of ongoing support to explain and answer questions about it if you don't want to use them as they are. There is a chance to make many mistakes with it if edited without guidance, so for that level of support, please become a BSG-BFBM IT Support Subscriber.
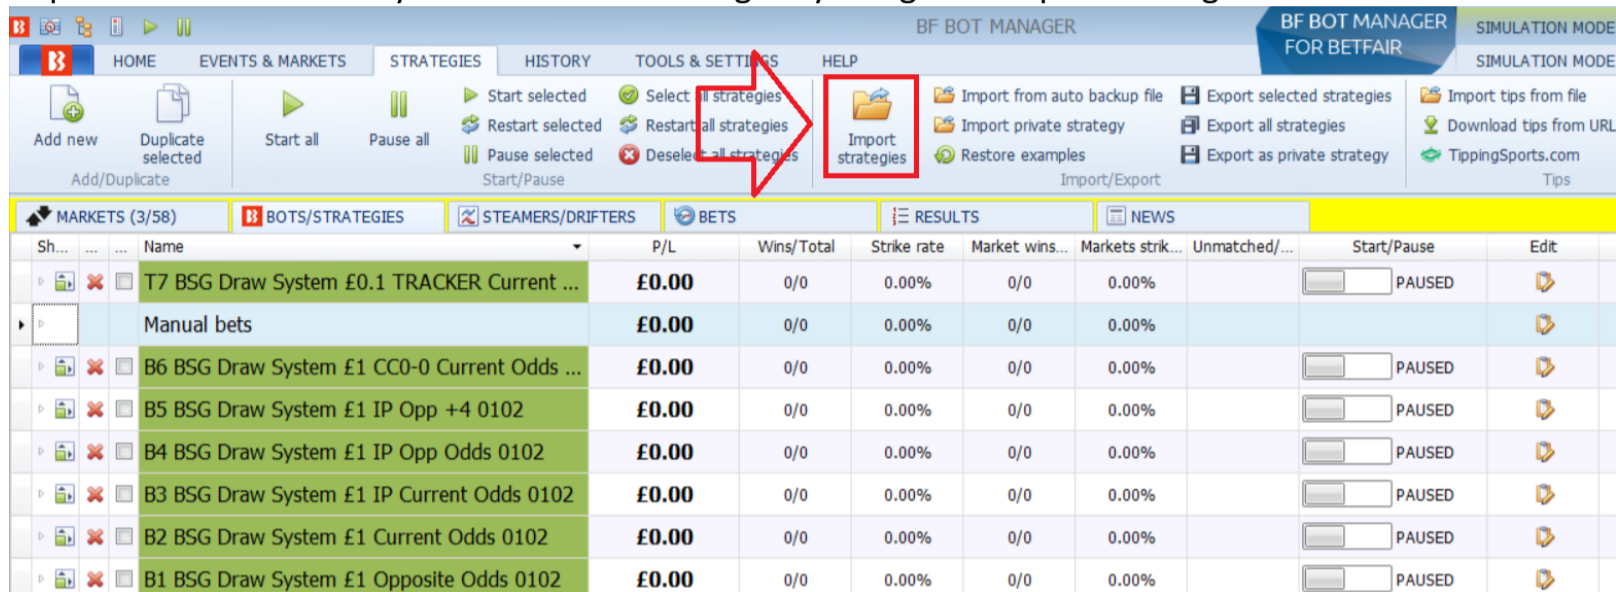

So non-BSG subscribers can get the bot set with default settings, then read my newsletters, read my blog posts, watch my videos, read the BFBM manual and edit the bots yourself based on your understanding of what is best.

Key Advice: Changing the time to bet for the Group 3 main bots is advisable so that you are not betting at exactly the same time as everyone else with the standard bot set.

https://bettingsystemsguide.com/start-now/
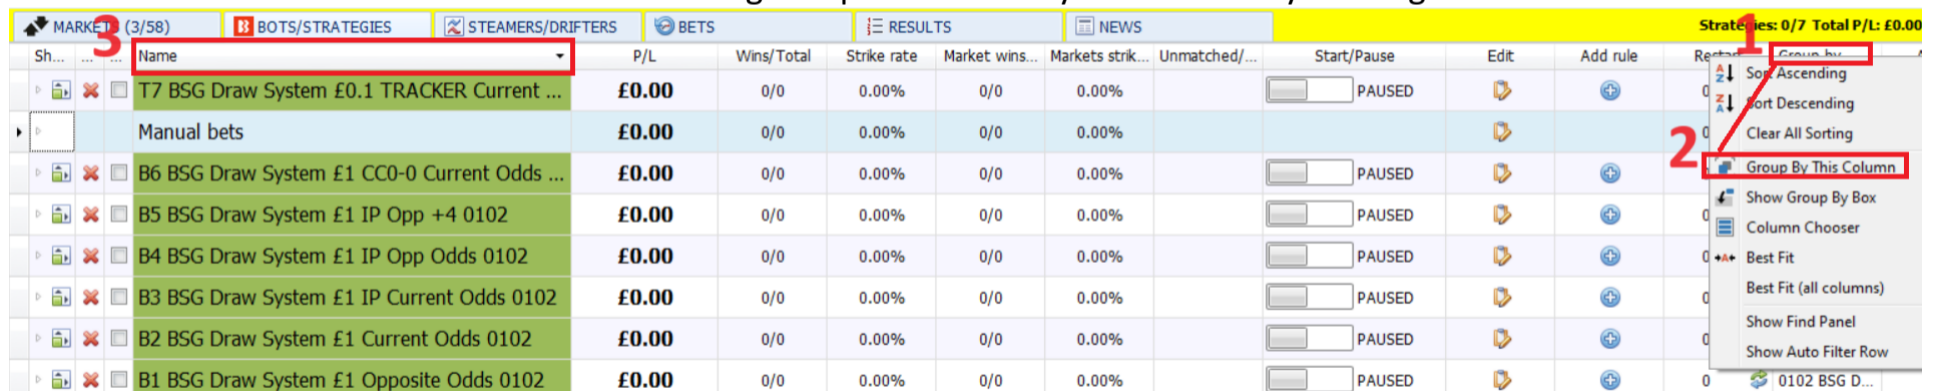

4.3 How to import the BFBM bot set

4.3.1	Import the bot set directly into the Bf Bot Manager by using the "Import strategies" button.
4.3.2	Right-click the "Group by" column header and left-select "Group by this column" to make the bot into an easy to view group set that automatically shows you the group P/L total. Left-click the "Name" column to order the strategies alphanumerically A1-T7 for easy viewing.

4.4 Overview of bot setup

This is my betting portfolio.

It is a combination of 3 separate systems: Betaminic back strategies, Betaminic lay strategies and my BSG draws system.

Each betting system is split into groups.

Group 1 - Tip receiving bots placing 1 GBP bets with default market conditions

Group 2 - Tracking bots with market conditions for each separate strategy with Whitaker NLC staking and a 100 GBP bank.

Group 3 - The main betting bots with large banks. Change these bots if you want to edit the main betting bank size.

Group 4 - Monitoring bots. Some sets have additional monitoring bots if people want to test different ideas with the same tips.

Groups 1 & 3 bots are all necessary for each of the systems to work. Groups 2 and 4 are optional for tracking purposes

Setup Steps Overview (Detailed instructions further below.)

1. Delete all my old bots if you have any.

2. Import the new bot set.

3. There are 4 main Group 3 betting bots which are setup for a 2k bank. (03.01, BML 3.01, A1.02, A1.06)

The level stakes rule x 100 becomes the NLC bank. So the current 20 x 100 = 2,000 bank.

If you want a 1k bank, then change the 20 to 10.

If you want a 20k bank, then change the 20 to 200.

If you want a different bank size, then BSG Subscribers can email me to make changes and non-subscribers should edit the staking tab for each Group 3 bot to the bank size they want.

4. Follow the two BSG TippingSports accounts. Connect your TippingSports account to your BFBM software.

bsgDrawSys0_25 https://www.tippingsports.com/en/profile/10106

bsgZeroZero025 https://www.tippingsports.com/en/profile/10107

5. Setup market autoloading for FIRST_HALF_GOALS_05 if you want to run the BSG A1.07 tracker bots.

6. Follow the x35 Betaminic strategies. Connect your Betaminic account to your BFBM software.

4.6 How to connect your Betaminic account to your Bf Bot Manager software

> **Important**: Please note that Betaminic Is only responsible for generating picks in your Betamin Builder account. They are not responsible for making the Bf Bot Manager software or my bots work, so make sure that your BFBM bots are setup **before** your click to follow the Betaminic strategies since they will not refund picks generated in your Betaminic account but not bet on in the Bf Bot Manager since that is not part of their service.

See detailed instructions below:

1. First, login to your Betaminic Builder on the Betaminic website. Go to the "Bf Bot Manager" tab in the Betamin Builder.
2. Copy the first URL on that page by left-clicking on the green "copy" button. This is the "Recommended URL to Export Pending Picks for the next 6 hours".
(If your Bf Bot Manager URL is not there, email support@Betaminic.com to ask them to "enable the BFBM link" on your account.)
You need an active subscription for the URL to be enabled.
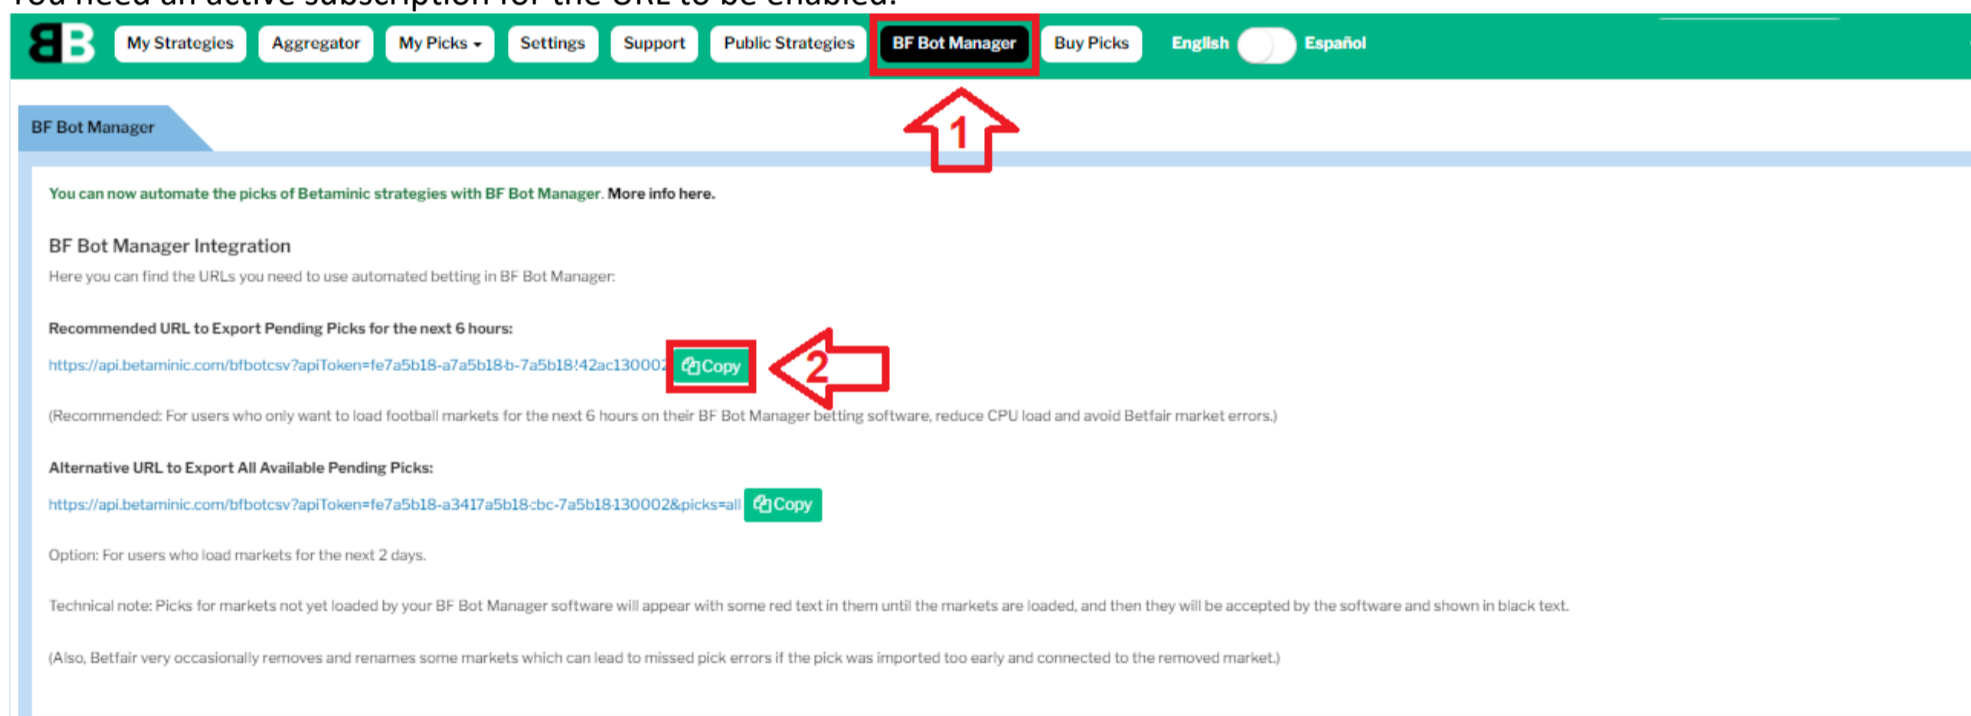

3. In the Bf Bot Manager software, click on the "Manage Tips" button.
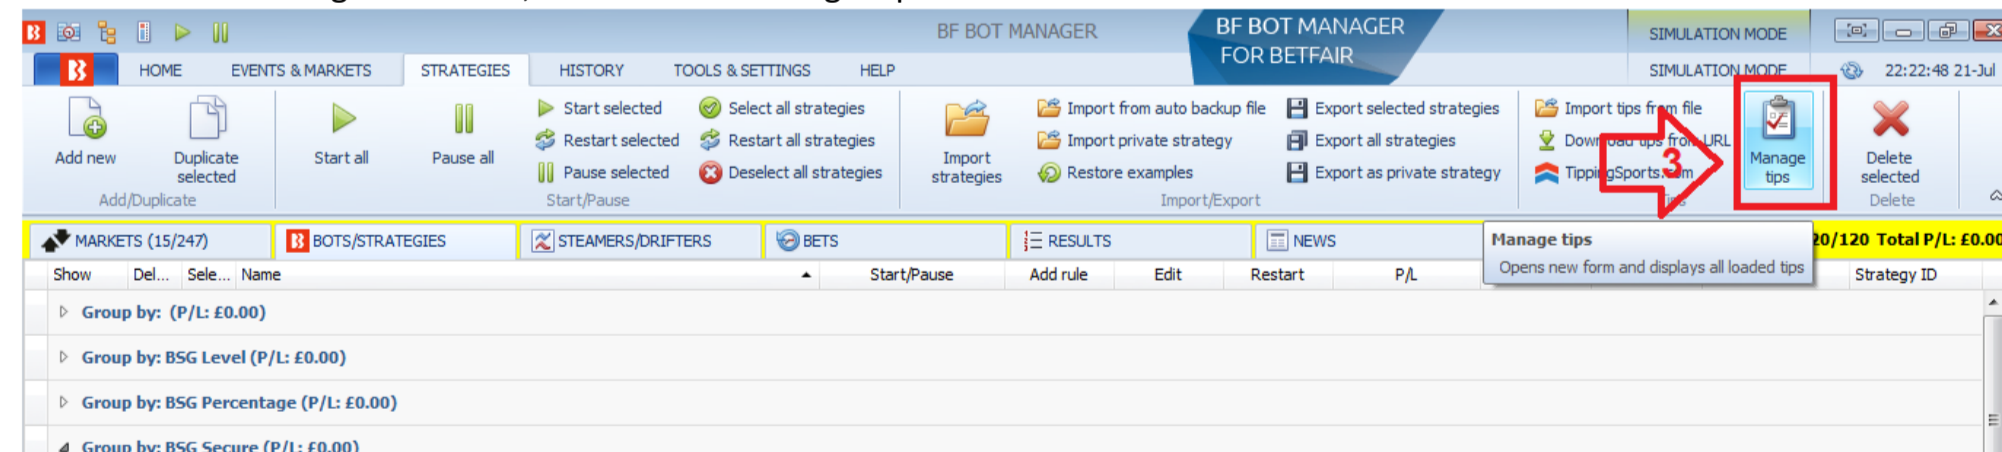

4.Click on the "Betaminic auto import settings" button in the Manage tips form.
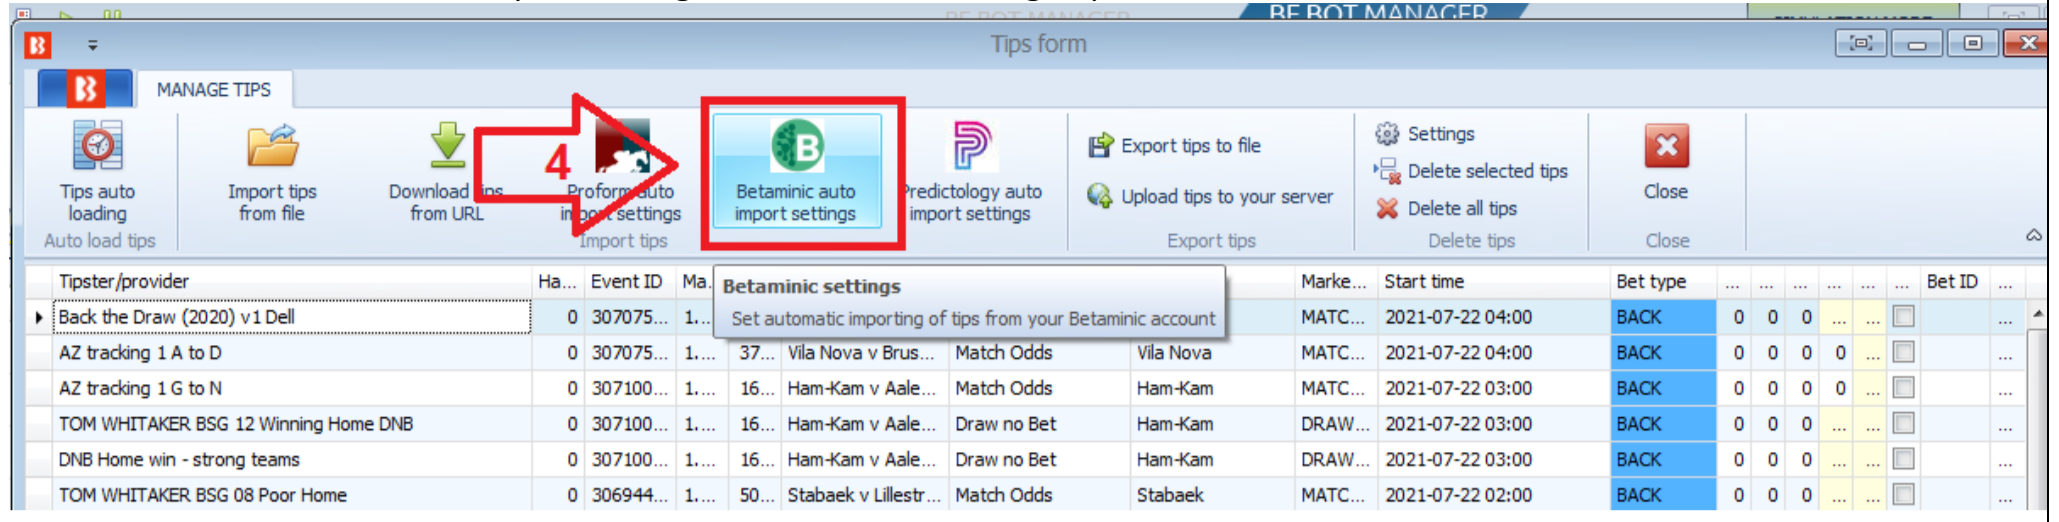

5. Tick the checkbox to enable "Automatically import tips from your Betaminic account"

6. Right click and paste your Betaminic URL into this field.

7. Click "Save" to keep these settings and exit this form. Your Betaminic account and Bf Bot Manager should now be linked.

8. To test, exit the BFBM software and restart it. If any Betaminic picks are available for matches kicking off in the next 6 hours, they should display here. Note that it will only download tips if there are picks for matches that will kick off within the next 6 hours, but picks appear in the Betamin Builder up to 48 hours before kick-off.

(Do not use the "Download tips now" button. It does not work properly. To force tip downloading, exit the BFBM software and restart it. But given time, picks will automatically download every 5 minutes if there are any new picks.)
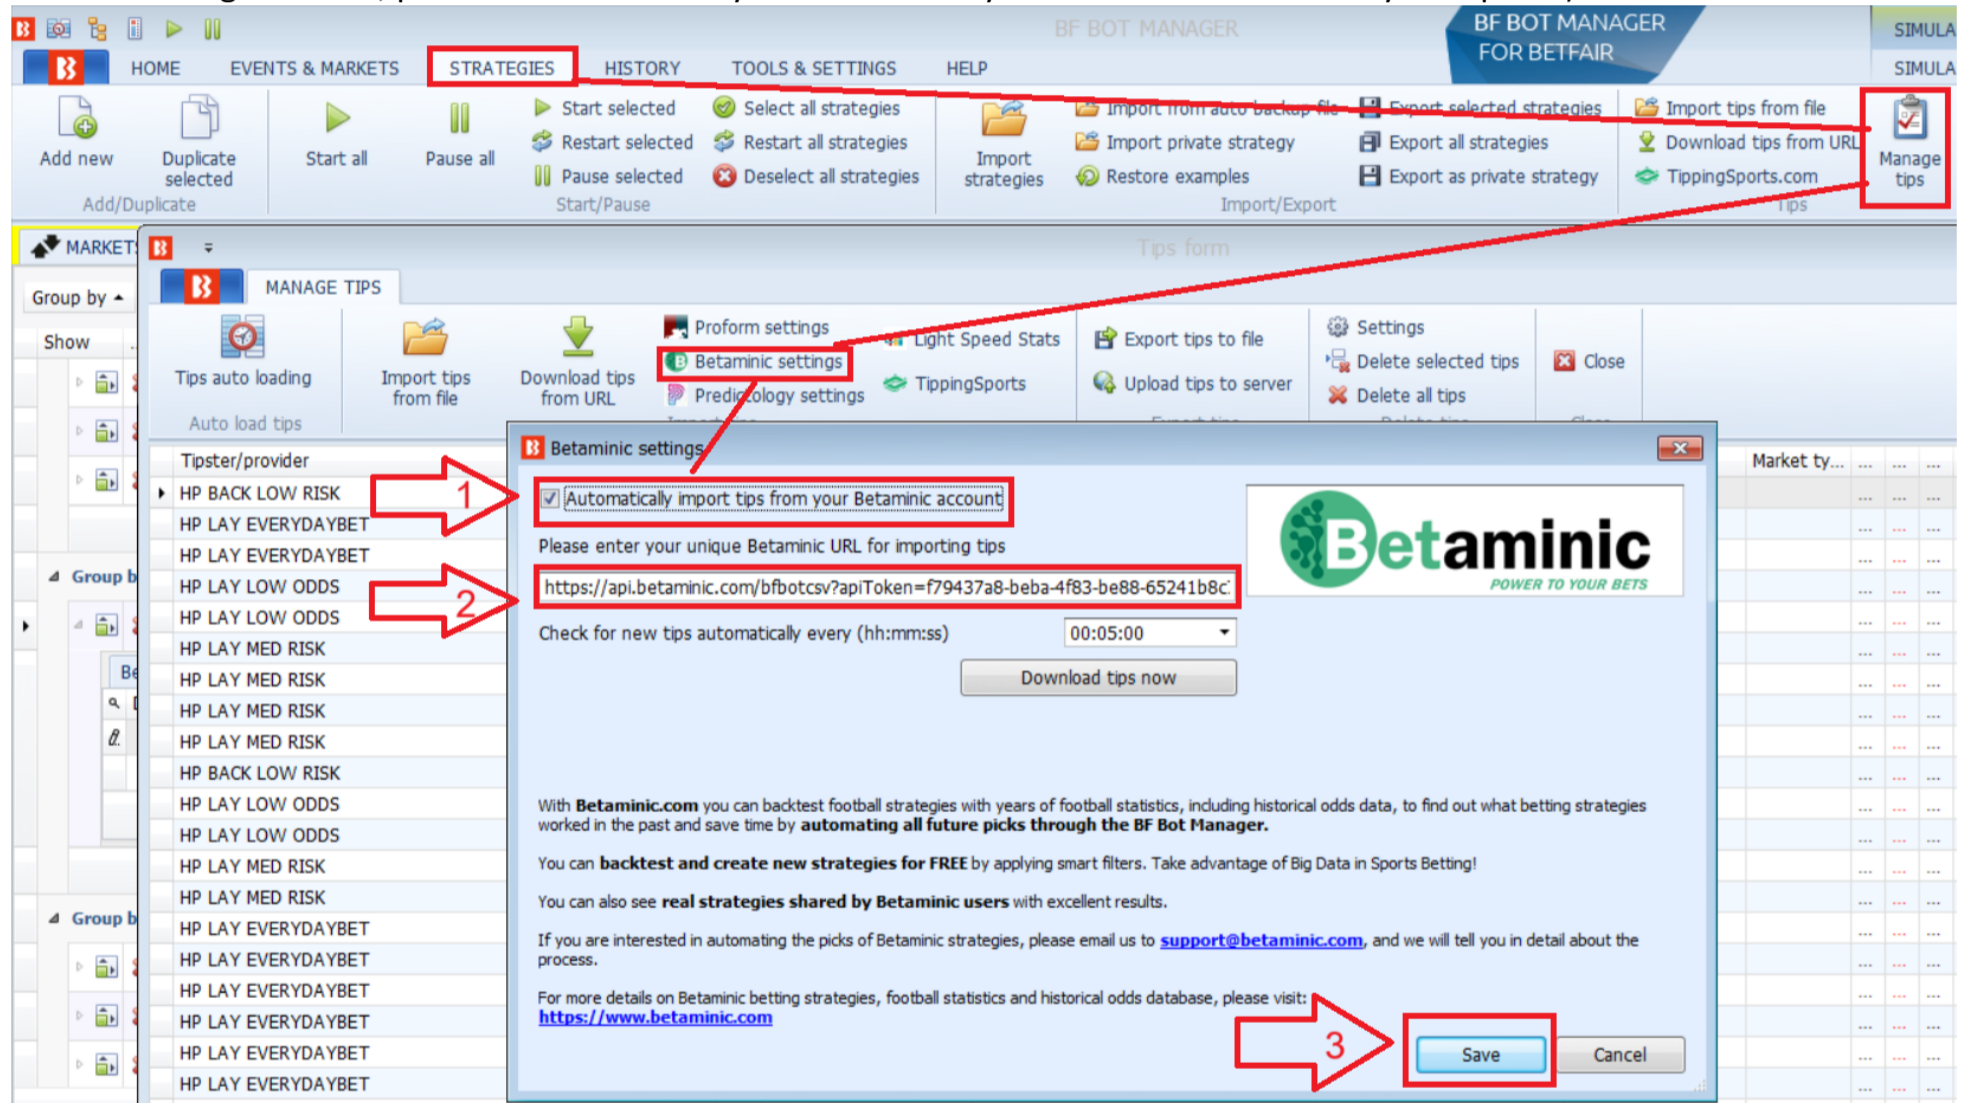

9. If the software has imported any tips, you should be able to see them in this Tips form.
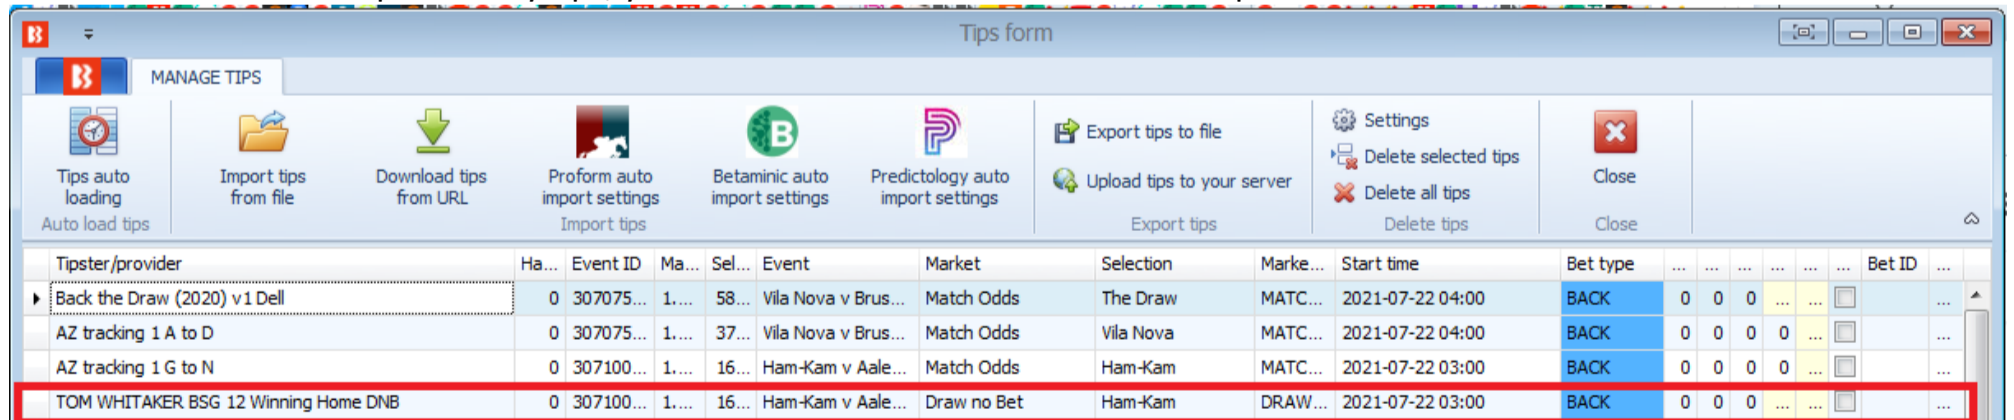

Troubleshooting

A) **If no picks appear in your "Manage Tips" form, check your Betaminic Pending Picks page to see if you have any picks for games due to kick-off in the next 6 hours. Only those tips will be imported.** (This is for technical reasons connected to how Betfair manages its markets. Picks appear in the Betamin Builder 36-48 hours before KO, but picks only appear in the BFBM 6 hours before KO. So there will always be more picks in your Betamin Builder Pending Picks page than you see in the BFBM Manage Tips form.)

B) If you want to force a test, you can copy/paste the Betaminc URL into a browser URL bar and hit enter. It will show you if there is any data to download in the URL currently.

4.7 How to find and follow the Betaminic strategies

If you are logged into the Betamin Builder, then you can click on the links here, or in my emails & PDF guides to go to the strategies.

30. Vitória do mandante com dos alta https://www.betaminic.com/system/strategy/details/614535
31. Pro6 Against the Trend Overs v2 (Updated 2020-07-15) https://www.betaminic.com/system/strategy/details/276547
32. Funger Over 2,5 - 1 (Use Funger Overs BFBM) https://www.betaminic.com/system/strategy/details/1028173
33. Colossus 05 Against the Trend Overs AL (Updated 2020-07-04) https://www.betaminic.com/system/strategy/details/263780
34. Draw, both teams scored https://www.betaminic.com/system/strategy/details/10366

On the Betaminic strategy screen, click the green tick icon to follow:

You can also search for strategies by name.

1. To find and follow them: you can "search by name" on the Betamin Builder "Public strategies" page, and follow them there by clicking on the green "Follow" button.

2. If you want to check what strategies you are following, tick the "Strategies I follow" checkbox and you will see only the strategies you are following. They will also have a green tick on their "Follow" buttons.

4.8 Connecting BFBM to TippingSports (For BSG Draw System)

1	Sign up for TippingSports. (Free, you do not need to pay them anything, ever.)
2	Go to **your** account page "My profile" from the drop down menu at the top. In your profile page, click on the "Automated betting" tab. Copy the URL lower down on this page in the "Automated betting on tips by Bf Bot Manager V3" section.

3	Paste this URL into your Bf Bot Manager "Manage tips" form area.
	Strategies > Manage tips > Tips auto loading
	Make sure you tick the "Active" checkbox on the left of the URL row to activate receiving tips from that URL.
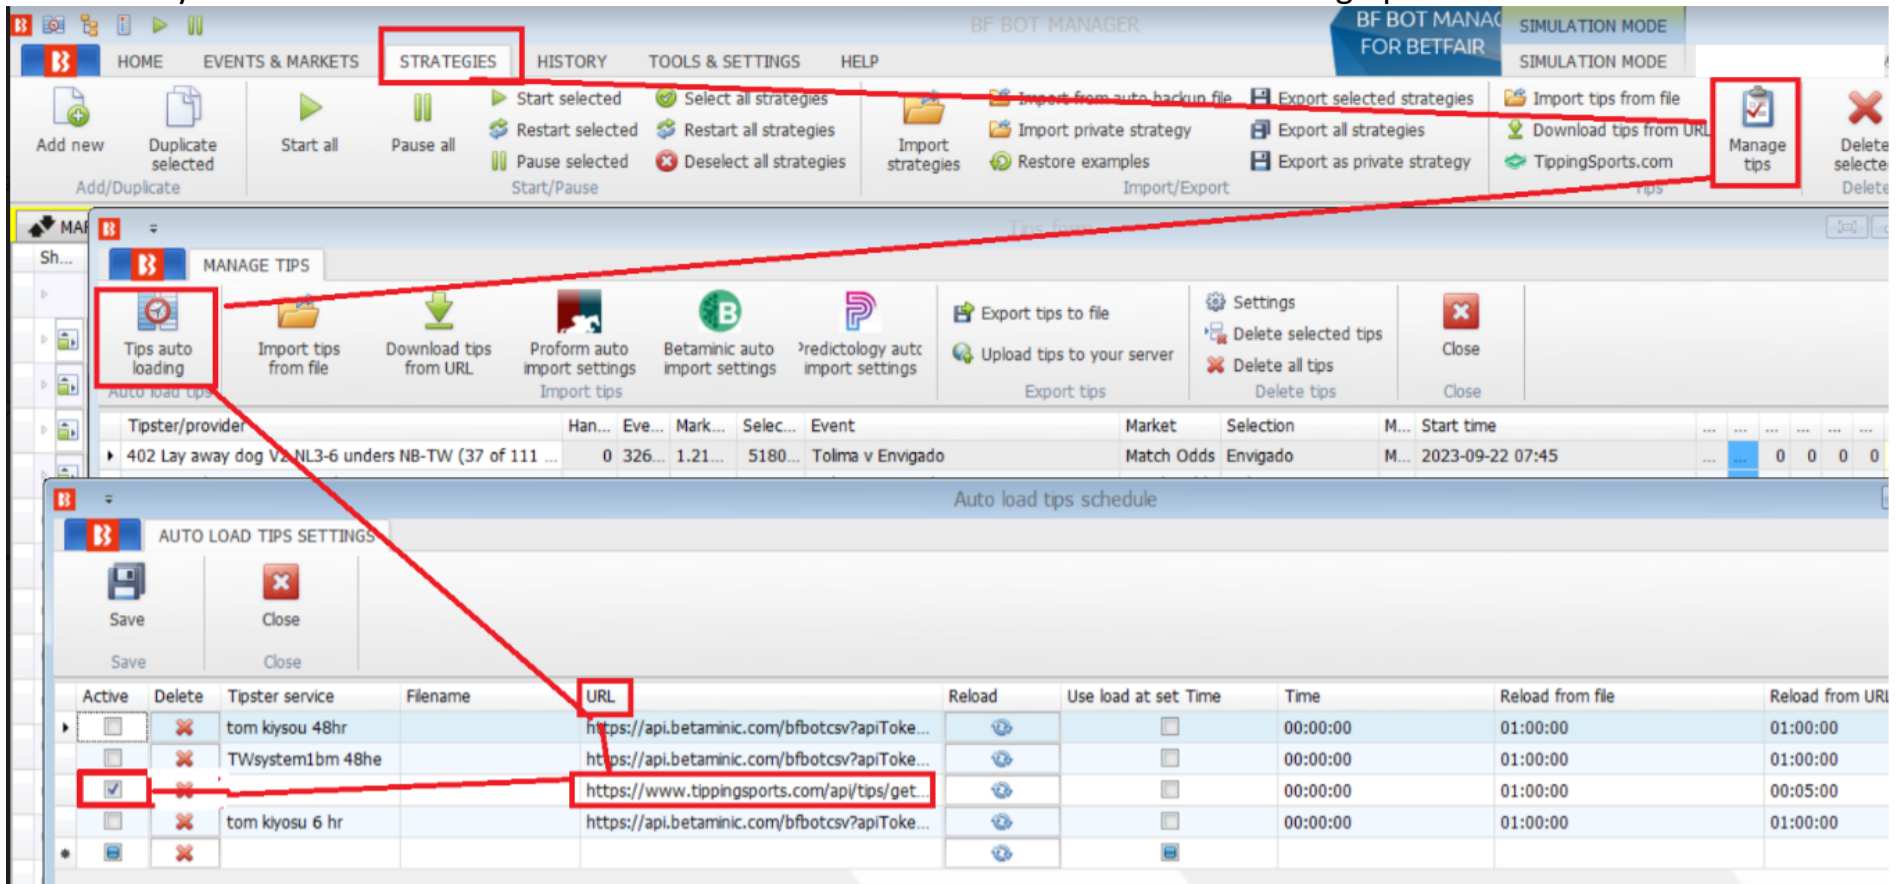

4	Be sure to change the "Reload from URL" time to every 2 minutes.
	(Note, if you are running 2 or more instances of BFBM that use this URL, then change the time to 3 minutes. If there are too many requests for tips in a short space of time, then the TippingSports website will give an error code and tips will not be downloaded.)
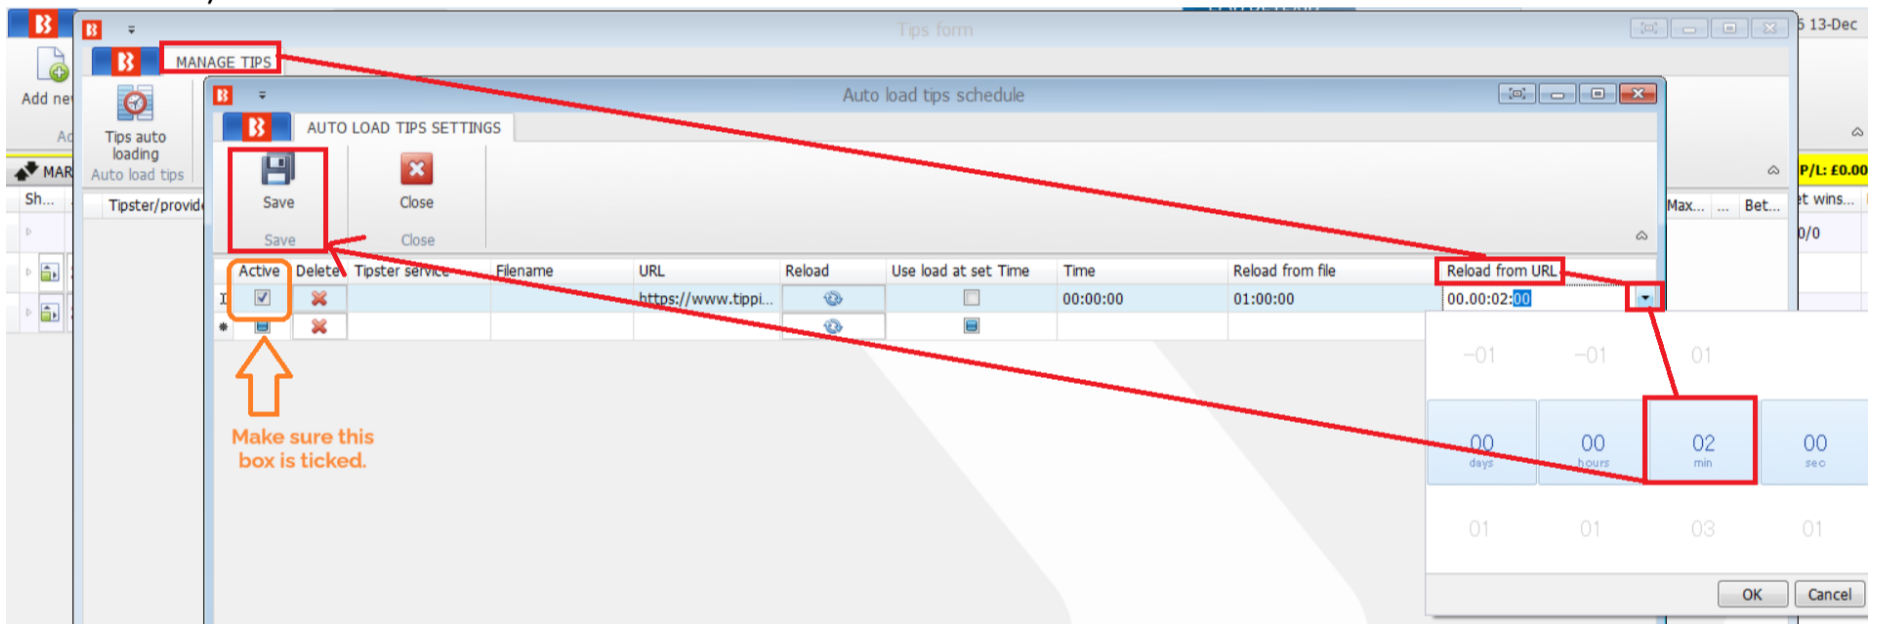

5	Make sure you clicked the green "Follow" on the profile pages of the TippingSports accounts you want to follow.
	BSG1 A2 FT Draw "**bsgDrawSys0_25**" https://www.tippingsports.com/en/profile/10106
	BSG1 A6 FT 0-0 Correct Score "**bsgZeroZero025**" https://www.tippingsports.com/en/profile/10107
	Optional account for BSG2 trend if you want to run tracking tests with it.
	BSG2 FT 0-0 Correct Score "bsg2ZeroZero" https://www.tippingsports.com/en/profile/9801
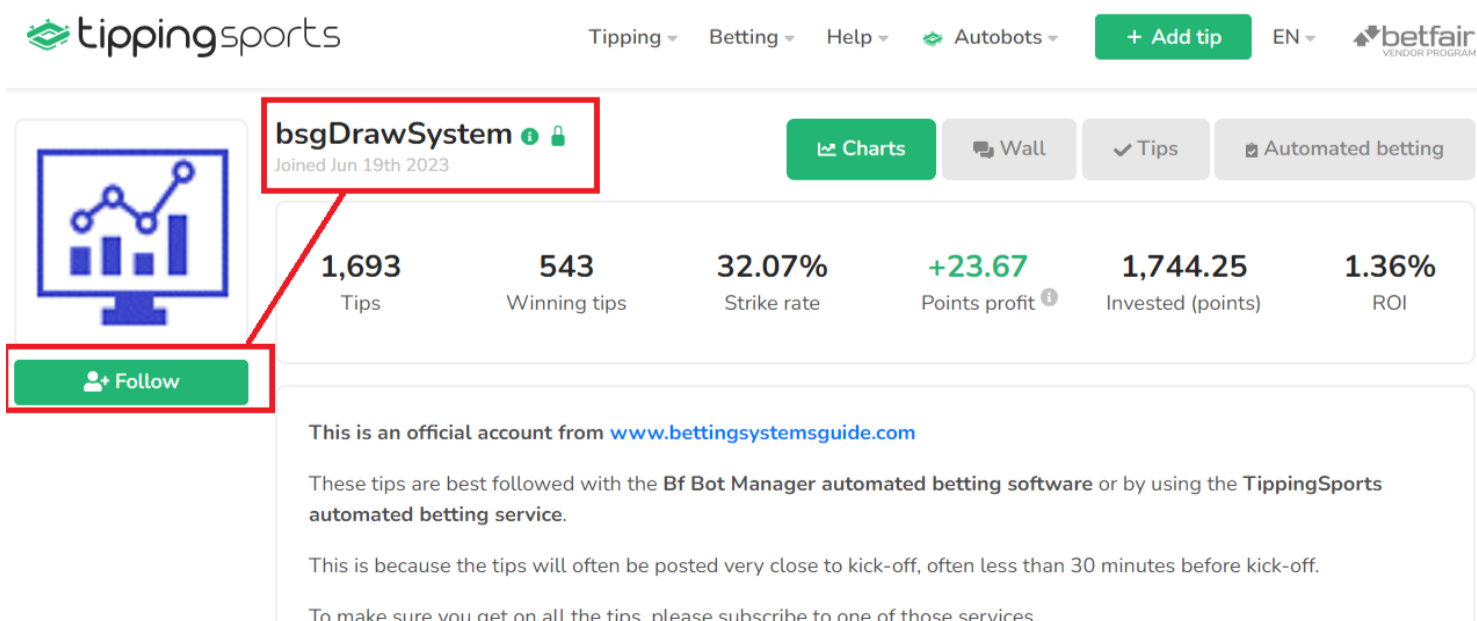

6	Email me to tell me your TippingSports username so that I can approve your account to receive the tips.

7	Start the bots.

It is recommended to run them in simulation mode for 1 day so that you see how the bots work and that your stake settings are working as expected.

When you are ready to bet in real mode, you can reset the bots P/L and bet data by left-clicking the "restart" icon for each bot

You can change the All-time P/L to zero by left-clicking on the cell and manually typing in "0" for each bot.

Note	Remember, the BF Bot Manager software needs to be switched on and connected to the internet to be able to place bets and get results data. This means your PC will need to be on 24 hours, 7 days a week. If you do not want that, then some people setup a VPS so that they do not need to worry about internet connectivity and their home PC.

4.9 Bot troubleshooting

If the bot is not placing bets:

1. Check if tips are being received in your Manage Tips form.

If there are tips, then the problem is with the BFBM setup. Check your bots, check you market autoloading, check your tip import settings.

If there are no tips, then the problem is that your TippingSports account is not properly connected to the BFBM software.

The Bf Bot Manager support team is often very fast in replying to issues, so I highly recommend them.
https://www.bfbotmanager.com/en/help

The Bf Bot Manual also has detailed explanations about each part of the software.
https://www.bfbotmanager.com/en/help/knowledge_base/section/16-manuals

4.10 Starting the bots

Click on the "PAUSED" button to start the bots. Click again to pause them.

It is recommended to run them in simulation mode for 1 day so that you see how the bots work and that your stake settings are working as expected.

When you are ready to bet in real mode, you can reset the bots P/L and bet data by left-clicking the "restart" icon for each bot
You can change the All-time P/L to zero by left-clicking on the cell and manually typing in "0" for each bot.

5 Commonly Asked Questions

Here are some common questions I get:

#	Common Questions	My answers
1	Are we due a winning run?	**No. Losing and winning runs come randomly and are unconnected.** Your results should move into profit over the long term due to the _volume_ of value bets placed.
2	Is it a good idea to increase stakes during a losing run?	**No. You can increase or decrease stakes anytime.** Winning and losing runs are not connected. Each time you change stakes, plan for a **100 point bank with Whitaker Staking** to handle the estimated volatility range for the next 1,000 bets.
3	If I want to take a break, will I miss out on the winning streak that is due?	**No. You can stop and start the system anytime you like**. Winning and losing runs are not connected. "Winning" is achieved by a high volume of bets with the expected win rate. It is up to you when you place those bets. You can take breaks anytime. It will not mess up the system.
4	Can I use percentage staking?	**Yes. Winning and losing runs are unconnected and come at random times.** Percentage staking protects the bank. BUT if you are unlucky enough to get a losing run that reduces your bank under its starting level, then it may take longer to reach your target profit levels. Success is based on the VOLUME of bets placed. The more bets you place, the more chance that your results will get closer to the long term mean win rate.
5	Which is better, percentage or level stakes? LC or NLC?	**Either are okay. Both have pros and cons.** **Level stakes and Whitaker Staking NLC** is risky in the short term if you hit several losing runs and your bank gets reduced a lot. But it will rebound quicker from early losing runs since it does not reduce its stakes. AND, the longer you follow the system, the safer your bank will be as losing runs will probably only affect your profit after you hit the 1,000 bet mark. Less risk for less gain over the long term. **Percentage staking linked to the cumulative bank balance with Whitaker Staking LC** allows you to commit a fixed amount to the system and not have to refill. If you get winning runs, then your bank will increase very quickly and make more money than the level stakes version, BUT once you have a high balance, you could still see that drop by 50% on a bad run, so you are _always_ risking _all_ of your bank. More risk for more gain over the long term. I run a Whitaker NLC bank now.
6	Which bots/systems should I follow?	**As many as possible.** The higher volume of value bets we apply to the bank, the more chance we have of getting results similar to the long term trend data.
7	What stake size should I use?	**Use Whitaker Staking with a 100 point bank.** If you want to use level stakes (i.e. for manual betting without referring to the Whitaker Staking table all the time), use the average win rate (or average odds) of your betting system and then use that ELSx4 bank calculated stake percentage for all your bets.
8	What is Whitaker Staking?	**Stake size changes depending on the odds to balance out risk/reward.** It bets more on low odds and less on high odds. The amount for each odds level is set so that it can withstand a ELSx4 losing run for that odds-implied win rate. It is a explained in more detail in _The Staking Plans Book_. https://bettingsystemsguide.com/whitaker-staking/

6 Whitaker Staking (ELSx4-1000) Full Staking Table
